## 2.Document Purpose

This Business Requirements Document (BRD) serves as the foundation for the detailed solution design of the Salesforce Automotive Cloud implementation for Alfardan Group Release 1 scope. The content outlined herein will directly inform and guide the technical design, configuration, development, and integration activities, ensuring alignment between stakeholder expectations and the delivered solution.

It aims to:

1. Clearly articulate the business problem or opportunity.
2. Define the functional requirements from a business and system perspective.
3. Provide a baseline for solution design, development, and implementation.
4. Support stakeholder consensus and serve as a point of reference throughout the project lifecycle.

This BRD is intended to be reviewed and approved by business stakeholders, project sponsors, and the technical implementation team to ensure mutual understanding and alignment before proceeding to subsequent phases of the project.

Chief Sales Officer

### 4.Scope

1. Business Units in current release: Alfardan Automobiles, Alfardan Premier Motors, and Alfardan Sports Motors.

2. Process scope: Lead Management, Case Management, Service Appointments, and Retail Sales / Opportunity Management.
3. Platform scope: Salesforce Automotive Cloud as the core business platform, with Keyloop Autoline/Drive and other connected systems integrated where required. In addition to Marketing and Data Cloud as the marketing business platforms.
4. Integration scope: Salesforce-to-Keyloop integration via MuleSoft.

## 5. Business Objectives

1. Standardize lead, case, service appointment, and retail sales processes across the in-scope automotive business units while preserving brand-specific operational needs.
2. Implement Salesforce Automotive Cloud as the primary customer engagement and process orchestration layer for CRM, service, and retail sales journeys.

3. Improve customer response times, process visibility, and accountability through structured routing, SLAs, approvals, and dashboards.
4. Enable controlled integration with Keyloop Autoline/Drive via MuleSoft while minimizing manual re-entry and improving data consistency.
5. Provide a scalable Release 1 foundation that can later be extended to other Alfardan business units and future capabilities.

## 6. System Personas

| Department | Role & Description                                                             |
|------------|--------------------------------------------------------------------------------|
| IT         | System Admin — Manages Salesforce setup, configuration, security, and support. |

|                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Salesforce / MuleSoft        | System / Integration User — Handles automations and integration touchpoints.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| CRM                          | CRM Executive / Agent — Handles leads, cases, follow-ups, and selected customer communications. Additionally                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| CRM                          | CRM Supervisor / Manager — Monitors queues, SLAs, escalations, and team performance. Additionally planning and overseeing the annual campaign calendar, approving segments, journeys, and marketing communications across respective Alfardan automotive brands.                                                                                                                                                                                                                                                                                                                                                                |
| Showroom / Service Reception | Sales Receptionist — Receives walk-in customers at the dealership showroom, creates an Opportunity under the customer's Account, and assigns it directly to a selected Sales Representative. The system sends a notification to the assigned representative upon assignment.                                                                                                                                                                                                                                                                                                                                                    |
| Sales                        | Sales Representative — Owns opportunities, quotations, reservations, and sales progression.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Sales                        | Sales Manager / Showroom Manager — Approves selected transactions and oversees sales execution.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Aftersales                   | Service Receptionist / Service Advisor — Books service appointments and handles service-facing customer actions. When a service walk-in customer expresses sales interest, the Service Receptionist creates an Opportunity, captures the customer's preferred dealership, and assigns the Opportunity to the Showroom Manager of that dealership. The Showroom Manager receives the Opportunity along with an auto-created task (15-minute contact window) to connect with the customer. The Showroom Manager then assigns the Opportunity to a Sales Representative, and the system sends a notification upon that assignment. |
| Marketing                    | Marketing User — Uses source attribution, campaign, and customer data for journeys and reporting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Marketing                    | Marketing Manager — Responsible for planning and overseeing the annual campaign calendar, approving segments, journeys, and marketing communications across respective Alfardan automotive brands.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Marketing                    | Marketing Executive — Day-to-day operator of Marketing Cloud journeys, campaign execution, audience management, and performance monitoring across Email, WhatsApp, and Push Notification channels. In business                                                                                                                                                                                                                                                                                                                                                                                                                  |

|    |                                                                                                                                                                                  |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|    | units where Marketing and CRM functions are combined, this role is performed by the CRM team.                                                                                    |
| IT | IT/Data User — Responsible for configuring Data Cloud data ingestion, managing identity resolution rules, building calculated insights, and maintaining data segmentation logic. |

## 7. Cross-Cutting Requirements

1. Customer profile visibility is shared at account level, while opportunities, cases, service appointments, quotations, and other transactional records remain segregated by business unit, brand and department as per the security model.
2. Keyloop Autoline/Drive remains the source of truth for major DMS-controlled data areas such as inventory, workshop capacity, and selected service / financial

records, with Salesforce acting as the customer engagement and orchestration layer.

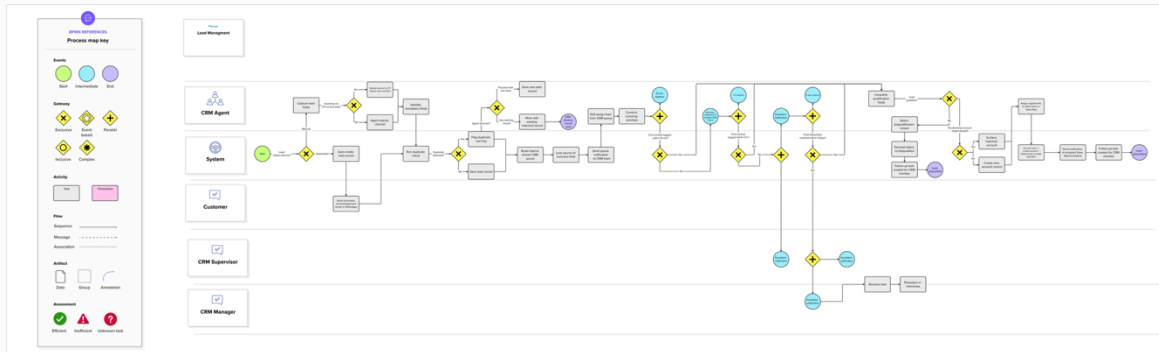

3. MuleSoft will serve as the middleware layer for Salesforce-to-Keyloop and all related integration touchpoints.
4. Salesforce Marketing Cloud will be leveraged for outbound customer communications, nurture journeys, and campaign audience management.
5. Salesforce Data Cloud will serve as the unified data platform supporting customer identity resolution and cross-channel analytics.
6. Where a process differs by brand or business unit, this BRD defines the unified baseline process and notes brand-specific deviations where they materially affect design.
7. Approvals, reminders, and escalations should be configurable and fully traceable through Salesforce.
8. Integration touchpoints with Keyloop Autoline/Drive systems are referenced within the relevant process sections and will be detailed further in the integration register.
9. Reports and dashboards across all in-scope processes will be owned and maintained primarily by the CRM Manager and CRM Supervisor. CRM Agents will have view-only access to dashboards relevant to their assigned work. Data export permissions on reports and dashboards will be restricted to CRM Manager, CRM Supervisor, and the System Administrator via Salesforce profile configuration; CRM Agent profiles will not include export access by default. SLA timers across all in-scope processes (Lead Management, Case Management, and Service Appointments) will respect the configured working calendar in Salesforce.
10. Records received outside working hours will have their SLA clock activated from the start of the next working period. Working hours, business days, and any off-day exclusions (including Fridays) will be configured and maintained by the System Administrator as part of the initial platform setup.
11. Senior managers across CRM, Sales, and Aftersales should be able to independently create, modify, and link reports and dashboards within their permitted data scope. Export to Excel must be enabled for senior management profiles.
12. Reports and dashboards requirements to be confirmed during the solution design phase.
13. All reports and dashboards will be scoped to the user's own business unit by default, in line with the agreed security model. Cross-BU reporting access, if required, to be defined and approved during the design phase.
14. Cisco will serve as the Computer Telephony Integration (CTI) layer between the Alfardan business-unit telephony systems and Salesforce, preserving the existing per-business-unit telephony separation while bringing inbound and outbound calls into the unified Salesforce customer journey. The integration is intended to support: (a) Lead Management, where inbound calls received by CRM agents are converted into manual Lead records with the Lead Source field defaulted to "Incoming Call", supporting the agreed manual lead capture flow; (b) Case Management, where Cisco CTI provides screen-pop with verified customer identification on inbound calls

so CRM agents can greet, authenticate, and contextualise the customer in real time, with optional case creation directly from the call interaction for sales, after-sales, and general inquiries; (c) Service Appointments, where Service Reception and CRM users can capture, modify, and confirm a Service Appointment booking on the customer's behalf during a live inbound call, mirroring the chatbot and web booking journeys; and (d) Customer 360 visibility, where every inbound and outbound call is automatically logged as an activity record on the relevant Account, Lead, Case, or Service Appointment for full interaction history. Cisco-specific configuration, per-business-unit number routing, and call-recording requirements will be detailed further in the integration register and the relevant process sections.

## 8. Lead Management

This section covers Release 1 Lead Management requirements for Alfardan Automobiles, Alfardan Premier Motors, and Alfardan Sports Motors, encompassing manual and digital lead intake, duplicate management, queue routing, qualification, SLA enforcement, disposition, conversion, and integration touchpoints.

## Lead Management

### 8.1 Manual Lead Creation from Supported Channels

|                         |                                                                                                                                |

| <b>Requirement Overview</b>    | CRM users can manually create leads from Cisco CTI / phone, WhatsApp, events, referrals, and other approved offline channels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should allow CRM users to manually create a lead record. The system should allow the Receptionist / Meet &amp; Greet User to create a manual lead record for walk-in customers, with the Lead Channel defaulting to Walk-in.</li> <li>2. The system should require the CRM user to select a Lead Channel (web, inbound, outbound), Medium (social media, referral, email, organic, affiliate, sms), and Source (google, facebook, Instagram, whatsapp, tiktok, snapchat, linkedin, website) from the predefined values for each field.</li> <li>3. The system should enforce minimum mandatory fields: customer name, mobile / phone number, and lead source. Vehicle / Brand of Interest (Will be automatically captured given the operating user original brand when identified) is mandatory; the picklist must include an 'Undecided' option so the field is never left blank.<br/>Additional optional fields TBP</li> <li>4. The system should allow address to be captured optionally and should not block lead creation if it is absent. The system should default City to "Doha" and Country to "Qatar" when the address block is presented to the CRM user, with both values remaining editable.</li> <li>5. The system should allow marking the Lead as "Interested in Test Drive" without any necessity of capturing test drive information. Optional fields for capturing date/time and location are available if needed.</li> <li>6. The system should default the Lead Source field to "Incoming Call" when a lead is manually created from a Cisco CTI inbound call screen-pop, with the CRM agent able to override the value if the lead originates from a different channel.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a CRM user selects a supported Lead Channel (web, inbound, outbound), Medium (social media, referral, email, organic, affiliate, sms), and Source (google, facebook, Instagram, whatsapp, tiktok, snapchat, linkedin, website) from the predefined values for each field, When they complete the minimum required fields and save, Then a new lead record is created and enters the CRM queue.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <ol style="list-style-type: none"> <li>2. Given a CRM user attempts to save a lead without the mandatory fields, When they submit, Then the system blocks submission and displays validation errors for each missing field. Email address is treated as an optional field for manual leads and must not block lead creation when absent.</li> <li>3. Given a CRM user creates a manual lead and selects 'Undecided' for Vehicle / Model of Interest, When the lead is saved, Then the record is created successfully with 'Undecided' captured in the Model of Interest field. The system should not block the Lead creation if no test drive information is inserted.</li> </ol> |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>1. Final mandatory field matrix to be confirmed during design.</li> <li>2. Walk-in definition and routing to Retail Sales to be validated with business stakeholders.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## 8.2 Automated Lead Creation from Digital Sources

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>User Story Title</b>        | [ALF-LM-02] Automated Lead Creation from Digital Sources                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Related Personas</b>        | System, CRM Executive / Agent                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>User Story</b>              | As a system, I should create leads automatically from supported digital sources so that inbound demand enters the CRM process immediately.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Requirement Overview</b>    | Salesforce automatically creates lead records from website forms, social media forms, marketing campaigns, and test drive forms. An acknowledgement is sent to the customer, and all automated leads enter the CRM queue for follow-up.                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should automatically create leads from website contact and inquiry forms (Number of forms to TBP) meta landing pages from SFMC, Salesforce Marketing Cloud journeys, and online test drive request forms.</li> <li>2. The system should send an automated acknowledgement communication to the customer upon successful lead submission. Template TBP</li> <li>3. The system should route all automatically created leads into the CRM queue / call list for agent action without manual intervention.</li> <li>4. CRM Team will receive a notification upon automated Lead creation to accept the record and contact the customer.</li> </ol> |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <ol style="list-style-type: none"> <li>5. The system should stamp the lead with the originating digital source channel at creation according to the matrix shared for Channel, Medium, and Source.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Acceptance Criteria</b>  | <ol style="list-style-type: none"> <li>1. Given a customer submits a supported website or digital form, When the submission is received by Salesforce, Then a lead record is created automatically and placed in the CRM queue.</li> <li>2. Given a lead is created from a digital source, When the record is saved, Then the customer receives an automated acknowledgement and the lead channel, medium and source is correctly stamped.</li> <li>3. Given an automated lead is in the CRM queue, When a CRM agent opens their queue view, Then the new lead is visible and actionable.</li> </ol> |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>1. Final list of digital source integrations and ownership to be confirmed before BRD sign-off.</li> <li>2. How forms will be integrated with Salesforce is to be confirmed before BRD sign-off.</li> </ol>                                                                                                                                                                                                                                                                                                                                                   |

### 8.3 Lead Duplicate Detection at Intake

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <b>User Story Title</b>        | [ALF-LM-03] Lead Duplicate Detection at Intake                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Related Personas</b>        | System, CRM Executive / Agent                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>User Story</b>              | As a system, I should check lead duplicates at intake so that the team can reduce duplicate customer records without blocking valid business activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Requirement Overview</b>    | The system performs duplicate checks on incoming leads based primarily on phone and email. Duplicates are warned / flagged rather than broadly blocked, preserving agent flexibility while improving data quality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should perform a duplicate check on every incoming lead, comparing against existing lead and customer records using phone number and email address, and QID as primary matching keys.</li> <li>2. The system should present a warning or flag to the CRM agent when a potential duplicate is detected, without automatically blocking the lead creation.</li> <li>3. The system should support a configurable short-window duplicate blocking rule for digital / automated leads to prevent rapid re-submission from the same contact.</li> <li>4. The system should display the matched existing record(s) to the agent so they can make an informed decision to either proceed or tackle the existing reco.</li> </ol> |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Acceptance Criteria</b>  | <ol style="list-style-type: none"> <li>1. Given a new lead is created with a phone or email matching an existing record, When the lead is saved, Then the system displays a duplicate warning and surfaces the matched record.</li> <li>2. Given a duplicate warning is shown, When the CRM agent reviews and decides to proceed, Then the system allows the lead to be saved without blocking.</li> <li>3. Given the configurable short-window blocking rule is active for digital leads, When a second submission arrives from the same contact within the window, Then the system suppresses or flags the duplicate automatically.</li> </ol> |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>1. Short-window duplicate blocking window duration and exact logic to be confirmed with business.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## 8.4 Lead Routing into Shared CRM Queue

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>User Story Title</b>        | [ALF-LM-04] Lead Routing into Shared CRM Queue                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Related Personas</b>        | System, CRM Executive / Agent, CRM Supervisor / Manager                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>User Story</b>              | As a system, I should route leads into a shared work queue so that CRM can action new demand consistently.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Requirement Overview</b>    | <p>All incoming leads — whether manual or automated — are routed to a shared CRM queue visible to the team. Managers can monitor the queue, reassign leads, and ensure no lead is missed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should route all new leads automatically into a shared CRM queue / call list upon creation.</li> <li>2. The system should allow authorized CRM users to self-assign from the queue.</li> <li>3. The system should provide CRM supervisors and managers with a view of all pending and in-progress leads in the queue.</li> <li>4. The system should support manual reassignment of leads by managers when redistribution is needed. The system should provide each CRM Agent with a personal list view on the Leads object in Salesforce, displaying only the lead records owned by or assigned to them, with lead name, status, and source visible at a glance.</li> <li>5. The system should send a notification upon lead addition to the queue and when assigned to a CRM agent.</li> </ol> |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Acceptance Criteria</b>  | <ol style="list-style-type: none"> <li>1. Given a new lead is created (manually or automatically), When it is saved, Then it appears in the shared CRM queue immediately.</li> <li>2. Given a CRM agent selects a lead from the queue, When they assign it to themselves, Then the lead is removed from the unassigned pool and attributed to that agent.</li> <li>3. Given a CRM manager opens the queue dashboard, When they review pending leads, Then they can reassign any lead to a different agent. Given a CRM Agent opens the Leads object in Salesforce, when they select their personal list view, then only lead records assigned to or owned by that agent should be displayed.</li> </ol> |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>1. Capacity-based assignment logic to be finalized during configuration.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## 8.5 Lead Qualification

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>Related Personas</b>        | CRM Executive / Agent                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>User Story</b>              | As a CRM user, I should qualify leads consistently so that only genuine and viable prospects are converted to sales opportunities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Requirement Overview</b>    | CRM agents follow a qualification process to confirm that the customer is reachable, genuine, and interested in a vehicle. Qualification focuses on customer legitimacy and interest confirmation, not on deep sales discovery.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The CRM user must fill in all required fields before qualifying a lead.</li> <li>2. The system should require the lead qualification outcome to be recorded before conversion to an opportunity is permitted.</li> <li>3. The system should track the qualification status on the lead record and surface it in reporting. The system should automatically log any outbound call made via the Cisco CTI integration during lead qualification as an activity record on the lead, capturing call direction, duration, outcome, and timestamp.</li> <li>4. The lead should hold a status of either New, Follow-up, On-Hold, Disqualified, or Converted (system-set upon opportunity creation).</li> </ol> |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Acceptance Criteria</b>  | <ol style="list-style-type: none"><li>1. Given a CRM agent opens a lead for qualification, When they complete the required qualification fields and mark the lead as qualified, Then the system enables the convert-to-opportunity action.</li><li>2. Given a lead is marked as qualified, When the agent views the lead record, Then the qualification outcome, date, and agent are captured and visible. Given a CRM agent makes an outbound qualification call via Cisco CTI, When the call ends, Then an activity record is automatically created on the lead capturing call direction, duration, and timestamp.</li></ol> |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"><li>1. Qualification field set and minimum criteria to be confirmed with CRM leadership.</li></ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## 8.6 Lead SLA Reminders and Escalations

|                         |                                                                                                                                   |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| <b>User Story Title</b> | [ALF-LM-06] Lead SLA Reminders and Escalations                                                                                    |
| <b>Related Personas</b> | System, CRM Executive / Agent, CRM Supervisor / Manager                                                                           |
| <b>User Story</b>       | As a system, I should support SLA reminders and escalations for leads so that response times and decision windows are controlled. |

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Requirement Overview</b>    | The system enforces lead response SLAs with a first-contact target of 15 minutes, a secondary checkpoint at 1 hour, and a final lead decision target of 3 days. Automated reminders and supervisor notifications are triggered when thresholds are breached.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should trigger an automated reminder to the assigned CRM agent if first contact has not been logged within 15 minutes of lead assignment.</li> <li>2. The system should trigger a second reminder at the 1-hour mark if the lead remains uncontacted, escalating to both the assigned CRM Agent and the CRM Supervisor.</li> <li>3. The system should trigger an escalation notification to the CRM Supervisor and CRM Manager if the lead has not reached a final disposition within 3 days.</li> <li>4. The system should surface SLA status visually on the lead record and in the queue dashboard for management visibility. The system should enforce the following SLA escalation matrix for lead response: (1) At 15 minutes — no first contact logged: reminder sent to the Assigned CRM Agent; (2) At 1 hour — lead still uncontacted: escalation sent to the Assigned CRM Agent and CRM Supervisor; (3) At 3 days — no final disposition reached: escalation sent to the CRM Supervisor and CRM Manager. All thresholds are calculated against the configured working calendar, excluding non-working hours and designated off-days.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a lead is assigned and no contact activity is logged, When 15 minutes elapse, Then the system sends a reminder notification to the assigned CRM agent.</li> <li>2. Given no contact is logged after 1 hour, When the threshold is reached, Then the system sends an escalation notification to both the assigned CRM Agent and the CRM Supervisor.</li> <li>3. Given a lead has not progressed after 3 days, When the deadline is reached, Then the system notifies the CRM Supervisor and CRM Manager for management intervention.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Exact reminder cadence and notification channels to be confirmed during design.</li> <li>2. SLA clock start point (lead creation vs. queue assignment) to be agreed with the business. SLA timers will be configured to respect the business working calendar; Fridays and any non-working hours will be</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|  |                                                                                                                                        |

## 8.7 Non-Progressing Lead Disqualification

|                             |                                                                                                                                                                              |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>User Story Title</b>     | [ALF-LM-07] Non-Progressing Lead Disqualification                                                                                                                            |
| <b>Related Personas</b>     | CRM Executive / Agent, System                                                                                                                                                |
| <b>User Story</b>           | As a CRM user, I should disqualify non-progressing leads so that reporting and future nurture remain accurate.                                                               |
| <b>Requirement Overview</b> | Leads that do not progress to a sales opportunity must be clearly marked with a reason code. Disqualification options include Unreachable, Wrong Inquiry, Spam, Not Genuine. |

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                | and Other with an option to insert other reasons. All records are retained for future reference and nurture journeys.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should provide CRM users with a defined list of disqualification reasons such as Unreachable, Wrong Inquiry, Spam, Not Genuine. and Other</li> <li>2. The system should require a disqualification reason to be selected before a lead can be closed or deactivated.</li> <li>3. The system should retain all disqualified lead records and their associated history for future reference and re-engagement campaign use.</li> <li>4. The system should make disqualified leads available for nurture journey targeting through Salesforce Marketing Cloud.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a CRM agent attempts to close or disqualify a lead, When they select the status, Then the system requires a reason code before saving.</li> <li>2. Given a lead is disqualified, when the record is saved, then it remains visible in the system with full history retained.</li> <li>3. Given a Marketing user needs to target previously disqualified leads, When they apply a filter for disqualified leads, then the records are available for campaign audience building.</li> </ol>                                                                                   |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Final disqualification reason list to be provided and confirmed by business.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## 8.8 Lead Conversion to Account and Opportunity

|                             |                                                                                                                                                                                                                          |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>User Story Title</b>     | [ALF-LM-08] Lead Conversion to Account and Opportunity                                                                                                                                                                   |
| <b>Related Personas</b>     | CRM Executive / Agent, System, Sales Representative                                                                                                                                                                      |
| <b>User Story</b>           | As a CRM user, I should convert qualified leads into account and opportunity records so that sales can continue the retail process.                                                                                      |
| <b>Requirement Overview</b> | Upon qualification, CRM converts the lead. Salesforce creates or links the customer account and creates the opportunity in a single flow, assigning it directly to Sales. Notes and source information are carried over. |

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should trigger a lead conversion flow upon CRM agent action that creates or matches a customer Account and creates a linked Opportunity in one operation.</li> <li>2. Where the lead conversion matches an existing customer Account, the system should create an Opportunity linked to that existing Account only, without creating a duplicate Account record.</li> <li>3. Where a lead expresses intent to make a down payment or deposit prior to full qualification, the system should require the CRM user to convert the lead to a customer Account first before any payment can be recorded. Upon conversion, the system should support two payment modes: a payment linked to an existing inquiry or opportunity record in Keyloop, or an open payment recorded against the Account pending opportunity assignment.</li> <li>4. The CRM user should assign the newly created Opportunity to the Sales team or a specific Sales Representative without requiring an intermediate handover task.</li> <li>5. The system should carry over relevant lead data — including source, notes, vehicle of interest, and qualification details — into the converted Opportunity.</li> <li>6. The system should notify the assigned Sales Representative via Salesforce notification when an Opportunity is created through lead conversion.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a CRM agent initiates lead conversion on a qualified lead, When they complete the conversion flow, Then a customer Account and Opportunity are created or linked in a single operation.</li> <li>2. Given a CRM agent converts a lead that matches an existing customer Account, when they confirm the match and proceed, then the system creates a new Opportunity linked to the existing Account and does not create a duplicate Account record.</li> <li>3. Given the Opportunity is created through conversion, When the Sales Representative logs in, Then they receive a notification and the Opportunity is visible in their pipeline with all lead data pre-populated.</li> <li>4. Given lead source and notes exist on the lead, When the conversion is complete, Then those details are visible on the converted Opportunity record.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|                             |                                                                                                                                                                                                                                                                                                                         |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>1. Sales assignment logic (pool vs. specific rep) to be confirmed per business unit.</li> <li>2. Payment mode selection (linked vs. open) and the corresponding Keyloop record-linking logic to be confirmed with finance and IT during the integration design phase.</li> </ol> |

| <b>User Story Title</b>        | [ALF-LM-09] Account Matching and Cross-BU Visibility Control                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Related Personas</b>        | System, CRM Executive / Agent, System Admin / IT                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>User Story</b>              | As a system, I should support account matching and controlled visibility so that the same customer is reused across business units without exposing transactional records unnecessarily.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Requirement Overview</b>    | During lead conversion, existing customer profiles are surfaced to prevent duplication. Account-level visibility is shared across in-scope business units, while transactional records such as opportunities, cases, and service appointments remain business-unit segregated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should surface potential matching customer Account records during lead conversion based on available identifiers such as name, phone, and email.</li> <li>2. The system should prompt the CRM user to link to an existing Account rather than creating a duplicate when a confident match is identified.</li> <li>3. The system should enforce that customer Account profile data is visible across all in-scope business units within the defined security model.</li> <li>4. The system should ensure that Opportunities, Cases, Service Appointments, and other transactional records remain visible only to the originating business unit. The system should permit Sales team members to create new customer Account records. Editing of existing Account core profile data (such as name, QID, and contact details) should be restricted to an authorized role to be agreed with the business, in order to protect data integrity.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a CRM agent converts a lead for a customer who has an existing Account, When conversion is initiated,</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <p>Then the system presents the matched Account and prompts the agent to link rather than duplicate.</p> <ol style="list-style-type: none"> <li>Given a converted lead is linked to an existing Account, When a CRM user from a different business unit views the Account, Then they see the shared customer profile but cannot access the other BU's transactional records.</li> <li>Given an Account is created from a new lead conversion, When a second BU creates a lead for the same customer later, Then the system surfaces the existing Account for reuse.</li> </ol>                                                                                                                                                                                                                                                                                                       |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>1. Contact records created during or following lead conversion follow the brand-specific Contact record type model defined in ALF-AC-01. The system should create a Contact of the appropriate brand record type at the point of conversion, based on the brand the lead originated from. The mapping of lead source or brand to the corresponding Contact record type is to be confirmed during the solution design phase.</li> <li>2. Final security model and sharing rules per object and business unit to be defined and validated by IT. Customer identification on the Account and Contact record should support two separate ID fields: one dedicated QID field with Qatar National ID format validation, and one open identification field to accommodate Omani ID, Passport Number, or other nationality document types.</li> </ol> |

## 8.10 Lead Source Attribution Capture

|                         |                                                                                                                              |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>User Story Title</b> | [ALF-LM-10] Lead Source Attribution Capture                                                                                  |
| <b>Related Personas</b> | System, CRM Executive / Agent, Marketing User                                                                                |
| <b>User Story</b>       | As a system, I should capture lead source attribution so that performance and conversion reporting can be analyzed reliably. |

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Requirement Overview</b>    | Lead source, channel, medium and/or campaign should be captured upon lead creation. Reporting supports lead volume, qualification rate, conversion rate, and SLA compliance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should capture lead source, channel, medium, and/or campaign name, on every lead record.</li> <li>2. The system should auto-populate source attribution fields from digital intake forms and integration feeds where the data is available.</li> <li>3. The system should retain source attribution on leads that are disqualified or disposed, to preserve campaign performance data.</li> <li>4. The system should support standard reporting on lead volume, qualification rate, conversion rate, SLA compliance, and channel effectiveness. The system should lock the Source of Business field on the Lead and Opportunity record after the record is created, preventing modification except by an authorized user role configured by the System Administrator or a CRM team member.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a lead is created from any channel, When the record is saved, Then lead source, channel, and medium are populated either automatically or by the CRM agent.</li> <li>2. Given a lead from an event campaign is later disqualified, When a Marketing user runs a campaign report, Then the disqualified lead is still included in campaign attribution reporting.</li> <li>3. Given a manager accesses the lead reporting dashboard, When they apply channel and source filters, Then they can see conversion and SLA compliance rates by attribution dimension.</li> </ol>                                                                                                                                                                                                                                 |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Source of business values and mapping to Keyloop fields to be confirmed during integration design.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## 8.11 Lead Integration Touchpoints

|                         |                                                      |

| <b>Related Personas</b> | System, System / Integration User, System Admin / IT |

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>User Story</b>              | As a system, I should support lead-related integration touchpoints so that inbound sources and downstream DMS needs are handled consistently.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Requirement Overview</b>    | Online forms and Keyloop sources create leads in Salesforce through integration. MuleSoft serves as middleware between Salesforce and Keyloop Autoline/Drive. Lead decisions are to be synced back to Keyloop.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should receive inbound lead data from website forms (number of forms TBP) and Keyloop via integration and create Salesforce lead records automatically.</li> <li>2. The system should use MuleSoft as the middleware layer for all Salesforce-to-Keyloop and related integration flows within the lead management scope.</li> <li>3. The system should support bidirectional integration (create or update) with Keyloop.</li> <li>4. Any lead created on Keyloop should be synced to Salesforce and vice versa.</li> <li>5. All updates on lead records will take place on Salesforce and synced back to Keyloop for record keeping.</li> <li>6. The system should log integration events and failures for monitoring and support.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given an online form is submitted on a brand website, When the integration processes the submission, Then a Salesforce lead record is created with correct source attribution within the agreed latency window.</li> <li>2. Given a Keyloop integration touchpoint is triggered during lead processing, When MuleSoft processes the event, Then data is exchanged correctly and the integration event is logged.</li> <li>3. Given an integration failure occurs, When the error is detected, Then an alert is generated for the integration support team and the affected lead is flagged for manual review.</li> </ol>                                                                                                                                  |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Detailed field mapping, API ownership, and payload formats to be confirmed in solution design.</li> <li>2. OEM / principal feed availability and connection specifications to be confirmed during solution design.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## 9.Account & Contact Management

### 9.1 Account & Contact Management – Unified Customer Profile with Brand-Level Contacts

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>User Story Title</b>        | [ALF-AC-01] Account & Contact Management – Unified Customer Profile with Brand-Level Contacts                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Related Personas</b>        | CRM Executive / Agent, System Admin / IT, System                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>User Story</b>              | As a business, we should maintain a unified master customer profile with brand-specific contact records so that customer identity is centralised while communication preferences, consent, and contact details remain independently managed per brand.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Requirement Overview</b>    | <ol style="list-style-type: none"> <li>1. Each customer is represented by a single Account record (master profile) in Salesforce, holding core identity fields.</li> <li>2. Under each Account, one Contact record per brand is maintained as a distinct record type, capturing brand-specific communication preferences and opt-in consent.</li> <li>3. This model supports cross-brand customer recognition while preserving brand-level data segregation.</li> <li>4. The Account master profile holds: Salutation, Full Name (as shown on QID), and QID. Each Contact record (one per brand, as a distinct record type) holds: Primary Email, Primary Phone Number, Preferred Language, Preferred Communication Channel, and Opt-In Consent for Marketing Communications. Full field lists for both objects to be confirmed during solution design.</li> </ol>     |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should maintain one Account record per customer as the master profile, holding the customer's salutation, full name as shown on QID, and QID as the primary unique identifier.</li> <li>2. The system should support multiple Contact records under a single Account, with one Contact per brand represented as a distinct Salesforce record type. Each Contact record should capture the customer's primary email, primary phone number, preferred language, preferred communication channel, and opt-in consent for marketing communications.</li> <li>3. The system should enforce uniqueness of QID at the Account level — no two Account records may share the same QID.</li> <li>4. The system should enforce duplicate prevention at the Contact level within each brand record type — the same</li> </ol> |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <p>customer may not have more than one Contact record of the same brand record type under a single Account.</p> <ol style="list-style-type: none"> <li>5. Cross-brand duplication at the Contact level is permitted by design — the same customer may hold one Contact record per brand under the same Account.</li> <li>6. Opt-in consent captured on a Contact record should apply only to communications issued by the brand associated with that Contact's record type, ensuring brand-level consent independence.</li> </ol>                                                                                                                                                                                                                                                 |
| <b>Acceptance Criteria</b>  | <ol style="list-style-type: none"> <li>1. Given a CRM user creates a new Account, when a QID matching an existing Account is entered, then the system displays a duplicate warning and prevents the creation of a second Account with the same QID.</li> <li>2. Given a CRM user creates a Contact under an existing Account for a given brand, when a Contact of the same brand record type already exists under that Account, then the system displays a duplicate warning and prevents creation of a second Contact of the same type.</li> <li>3. Given a customer has Contact records for two different brands under the same Account, when one brand updates the opt-in consent on their Contact, then the other brand's Contact opt-in status remains unchanged.</li> </ol> |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>1. Full list of fields for both Account and Contact records to be confirmed and provided during the solution design phase.</li> <li>2. Contact record type names will be brand-specific. The exact list of brands to be represented as distinct Contact record types is to be confirmed during the solution design phase.</li> <li>3. Migration approach for existing customer data from Keyloop into this Account and Contact model to be addressed in the data migration plan.</li> <li>4. Security model governing which users can view or edit Account master fields vs. their own brand Contact record to be defined during design.</li> </ol>                                                                                        |

## 10.1 Opportunity Creation from All Supported Intake Paths

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>User Story</b>              | As a sales-facing organization, we should be able to create opportunities from all supported intake paths so that every valid retail sales pursuit is tracked from the correct starting point.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Requirement Overview</b>    | Opportunities may originate from converted leads, direct sales-created records, referrals, and walk-ins. CRM creates and assigns to Sales for CRM-originated demand. For walk-in customers at the showroom, the Sales Receptionist creates the Opportunity under the customer's Account and assigns it directly to a selected Sales Representative, triggering a system notification. For walk-in customers at the service reception who express sales interest, the Service Receptionist creates the Opportunity, captures the preferred dealership, and assigns it to the Showroom Manager. The Showroom Manager receives an auto-created task (15-minute window) to contact the customer and subsequently assigns the Opportunity to a Sales Representative, with a system notification sent upon assignment.                                                                                                                                                                                                                                                                                                  |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should support opportunity creation from: converted CRM leads, direct sales-created opportunities, referrals, and walk-in customers.</li> <li>2. The system should allow CRM to create and assign opportunities to Sales following lead conversion, without requiring an intermediate handover task.</li> <li>3. The system should allow CRM users to create opportunities directly under a customer Account for walk-in and direct-sales scenarios.</li> <li>4. The system should allow a Sales Receptionist to create an Opportunity under a customer Account for walk-in showroom customers and assign it directly to a selected Sales Representative, triggering a system notification upon assignment.</li> <li>5. The system should allow a Service Receptionist to create an Opportunity for a service walk-in customer expressing sales interest, capturing the customer's preferred dealership, and assigning the Opportunity to the Showroom Manager of that dealership. The system should automatically create a task for the Showroom</li> </ol> |

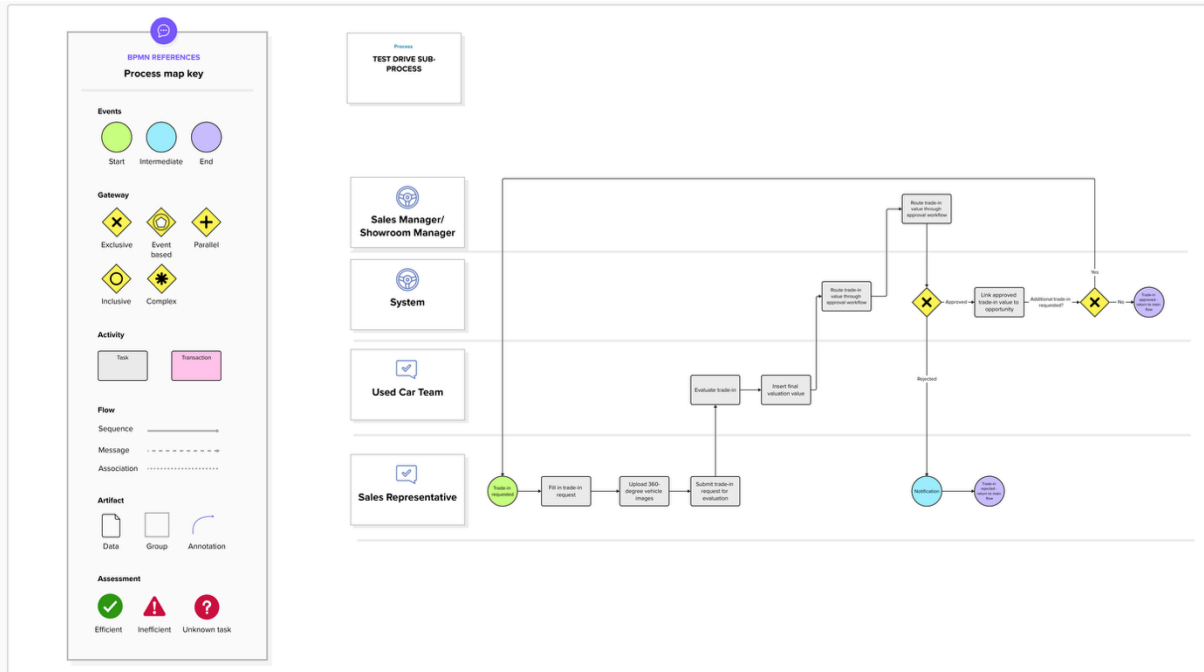

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <p>Manager with a 15-minute contact window upon Opportunity assignment. The Showroom Manager should then assign the Opportunity to a Sales Representative, with a system notification triggered upon that assignment.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Acceptance Criteria</b>  | <ol style="list-style-type: none"> <li>1. Given a CRM agent converts a qualified lead, When the conversion completes, Then an Opportunity is created and assigned to the Sales team directly.</li> <li>2. Given a CRM member receives a walk-in customer, When they create an Opportunity under the customer Account, Then the record is saved and notification is sent to Sales representative.</li> <li>3. Given different business units have different Receptionist involvement preferences, When the model is configured per BU, Then the applicable intake path is available to that BU's users only.</li> <li>4. Given a Service Receptionist creates an Opportunity for a service walk-in customer, when they assign it to the Showroom Manager, then the system creates the Opportunity, assigns it to the Showroom Manager, and auto-creates a 15-minute contact task. When the Showroom Manager subsequently assigns the Opportunity to a Sales Representative, then the system sends a notification to that representative.</li> </ol> |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>1. Receptionist direct opportunity creation model is configurable and not mandated across all BUs. Before creating a new Opportunity, the system should check whether the customer already has an open Opportunity for the same brand. Where one exists, the system should surface a warning to prevent duplicate Opportunity creation.</li> <li>2. If a duplicate Opportunity is created, the showroom manager should be notified for better visibility and data integrity control.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## 10.2 Opportunity Stage Progression and Pipeline Management

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>User Story</b>              | As a sales user, I should progress opportunities through a controlled stage model so that sales movement, forecasting, and reporting are standardized.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Requirement Overview</b>    | The opportunity stage model supports Consider, Explore, Select, Commit, and Take the Keys, with Closed Won and Closed Lost outcomes. The Consider stage allows early capture before a model is specified. Brand-specific sub-stages are supported.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should enforce a defined opportunity stage model with stages: Consider, Explore, Select, Commit, Take the Keys, Closed Won, and Closed Lost.</li> <li>2. The system should allow the Consider stage to be used without requiring a specific vehicle model or VIN, supporting early prospect capture. The system should automatically create a test drive record linked to the Opportunity when the Opportunity progresses from the Consider stage to the Explore stage.</li> <li>3. The system should automatically create a trade-in record linked to the Opportunity when the Opportunity progresses from the Consider stage to the Explore stage. The Sales Representative should record the trade-in outcome (Accepted / In Progress / Declined) on the linked trade-in record.</li> <li>4. The system should require vehicle / model information and support side processes — test drive, trade-in, and quotation — when the opportunity reaches the Explore stage.</li> <li>5. The system should support brand-specific sub-stages within the unified baseline stage model without breaking cross-BU reporting.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a Sales Representative creates an opportunity at the Consider stage, When they save without a vehicle model, Then the system accepts the record without validation errors.</li> <li>2. Given an opportunity is moved to Explore, When the stage is saved, Then the system enables the test drive, trade-in, and quotation sub-processes on the record.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|                             |                                                                                                                                                                                                    |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <b>3.</b> Given management runs a pipeline report across all BUs, When the report is generated, Then opportunities are grouped by the unified stage model regardless of brand-specific sub-stages. |
| <b>Assumptions/Comments</b> | <b>1.</b> Final stage names and sub-stage matrix to be confirmed with business and sales leadership during design.                                                                                 |

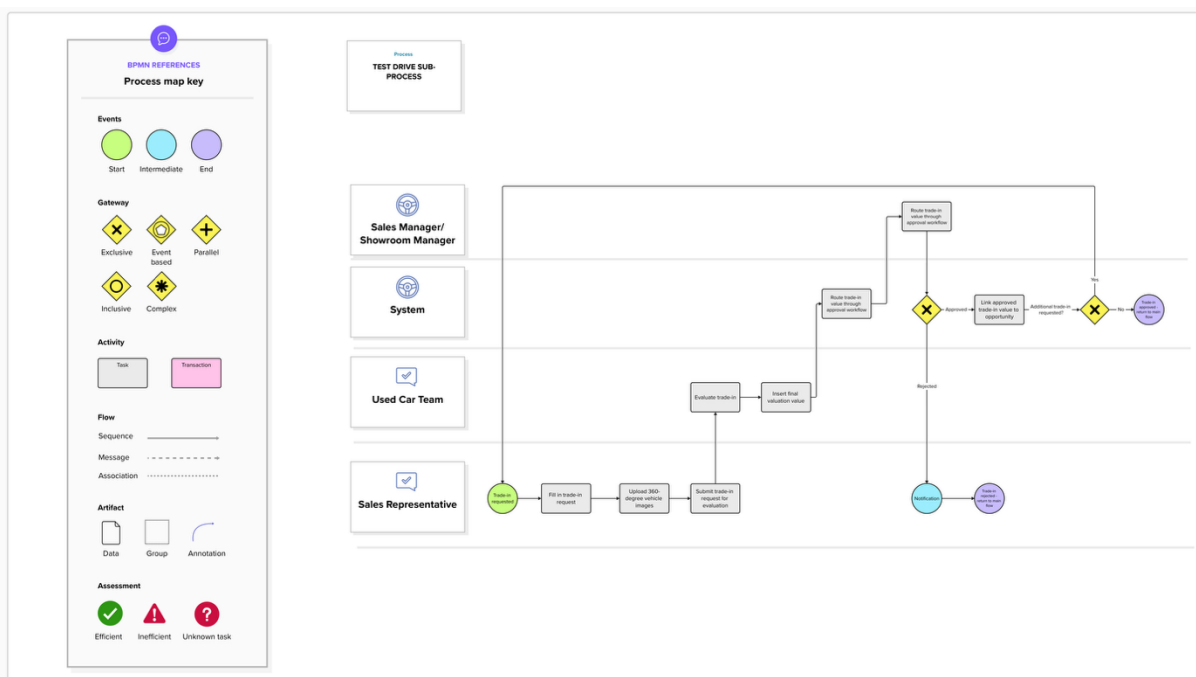

## 10.3 Test Drive Management

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <b>User Story</b>              | As a sales user, I should manage test drive requests inside the retail process so that customer evaluation of the vehicle is controlled and visible.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Requirement Overview</b>    | Test drive requests from website, chatbot, or manual sources first enter CRM for qualification before handover to Sales. Sales confirms the booking, executes the test drive, and captures product / vehicle feedback. CRM may separately capture experience feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should support test drive request intake from website forms, chatbot / WhatsApp, manual sales entry, and other approved channels.</li> <li>2. The system should route automated test drive requests to CRM for qualification before assigning them to a Sales Representative for execution.</li> <li>3. The system should allow a Sales Representative to confirm, schedule, and execute the test drive within the opportunity or a linked test drive record.</li> <li>4. The system should allow Sales to capture product / vehicle feedback from the customer after the test drive is completed.</li> <li>5. The system should support a separate CRM follow-up to capture experience / process feedback after the test drive. The system should require the Sales Representative to record a test drive result on the linked test drive record before the Opportunity can progress to the next stage. Supported result values should include at minimum Completed and Refused. If the result is Refused, the system should require a mandatory remarks field to capture the refusal reason before the record can be saved.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a website test drive request is submitted, When the system receives it, Then a lead is created for CRM qualification before Sales assignment.</li> <li>2. Given CRM qualifies the test drive request, When they hand it over, Then a Sales Representative receives an assignment notification and the test drive appears in their tasks.</li> <li>3. Given a test drive is executed, When the Sales Representative logs the feedback, Then the product feedback is stored on the linked opportunity record. Given a Sales Representative attempts to progress an Opportunity with a linked test drive record, when the</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|                             |                                                                                                                                                                                                                                                                                                         |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | test drive result has not been recorded, then the system should block stage progression until the result is captured. Given the test drive result is marked as Refused, when the Sales Representative saves the record, then a mandatory remarks field must be completed before the record is accepted. |
| <b>Assumptions/Comments</b> | <b>1.</b> Test drive vehicle inventory management and scheduling system to be confirmed.                                                                                                                                                                                                                |

## 10.4 Trade-In Request and Appraisal Visibility

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>User Story Title</b>        | [ALF-RS-04] Trade-In Request and Appraisal Visibility                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Related Personas</b>        | Sales Representative, Used Car Team, System                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>User Story</b>              | As a sales user, I should initiate trade-in requests so that the customer's current vehicle can be valued and reflected in the retail deal.                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Requirement Overview</b>    | Trade-In requests are recorded individually on the system without the need of an Opportunity to be present. If the trade-in request is done within opportunity stages, then the valued price appears as a negative line item on the quote reducing the final price.                                                                                                                                                                                                                                                        |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should allow a Sales Representative to initiate a trade-in request from within the opportunity, running in parallel with the sales process without blocking progression (up till quote stage).</li> <li>2. The system should require trade-in information from the Sales Representative upon the creation of the request to include Make, Model, Year, VIN, Plate Number, Mileage, Inspection Done?, Inspection Notes, Expected Trade-In Value and Source.</li> </ol> |

|                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                            | <ol style="list-style-type: none"> <li>3. The system should require the Sales Representative to upload 360 images of the vehicle before the record is submitted for evaluation.</li> <li>4. The system should allow the Sales Representative to submit the record for evaluation.</li> <li>5. The Used Car team should receive a system notification upon generation of the Eval Expert Book-In Sheet to begin their evaluation, and should be able to submit their final evaluation value, remarks, and any supporting documents or media files against the same trade-in record in Salesforce.</li> <li>6. The system should route the trade-in valuation through an approval workflow before it is accepted.</li> <li>7. The system should feed the accepted trade-in value into the opportunity quotation as a negative / offsetting line item.</li> <li>8. The system should support multiple evaluation records against a single trade-in request, allowing updated appraisals to be captured without duplicating the trade-in record on the opportunity.</li> <li>9. The system should generate the Eval Expert Book-In Sheet from Salesforce after the New Car Sales Representative has entered the required preliminary vehicle details, including make, model, year, mileage, and condition notes.</li> <li>10. The system should notify the New Car Sales Representative once the Used Car team submits their evaluation, enabling the sales process to continue.</li> <li>11. The system should make trade-in history visible at the customer account level across all business units, so that a Sales Representative from a different brand can see prior trade-in requests and their outcomes. The system should assign trade-in appraisal follow-up tasks to the Sales Representative who initiated the request. If that Sales Representative is no longer active, the task should be reassigned to the Sales Manager. If the appraisal is not completed within the expected timeframe, the system should escalate by creating a follow-up task for the Showroom Manager.</li> </ol> |
| <b>Acceptance Criteria</b> | <ol style="list-style-type: none"> <li>1. Given a Sales Representative initiates a trade-in, When the request is created, Then the opportunity continues to progress without being blocked by the trade-in status until quote stage.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <ol style="list-style-type: none"> <li>2. Given a trade-in value is approved, When the Sales Representative opens the quotation, Then the trade-in value appears as a negative line item in the deal summary.</li> <li>3. Given a second appraisal is required on the same trade-in, When the Sales Representative creates a new evaluation record, Then it is linked to the existing trade-in request without creating a duplicate opportunity-level trade-in.</li> <li>4. Given a Sales Representative from a different business unit opens the customer account, When they view the trade-in history section, Then prior trade-in requests and their outcomes are visible regardless of which business unit originated the request.</li> </ol>                        |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>1. Trade-in approval authority matrix to be provided by the business.</li> <li>2. Over-allowance amount field and Used Car / New Car department visibility rules to be confirmed with finance and business during design.</li> <li>3. The Eval Expert Book-In Sheet replaces the Trade-In Evaluation Form. No integration with the Eval Expert mobile application is included in this release; any supporting documents from the evaluation are attached manually by the Used Car team. This is to be confirmed during the solution design phase with Alfardan.</li> <li>4. Cross-BU trade-in history visibility is subject to the account-level security model; transactional data within each BU remains segregated.</li> </ol> |

## 10.5 Vehicle Search and Selection

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>Related Personas</b>     | Sales Representative, System                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>User Story</b>           | As a sales user, I should search and select vehicles accurately so that the customer is matched to the right stock or orderable vehicle.                                                                                                                                                                                                                                                                                          |
| <b>Requirement Overview</b> | <p>Vehicle search supports filtering by make, model, year, trim, color, price range, stock status, and location. Selection supports in-stock, in-transit, and ordered vehicles. Demo / placeholder vehicles support early-stage quotations.</p> <p>Vehicle media files — including exterior and interior photographs, 360° views where available, brochures, and promotional collateral — are surfaced directly in the search</p> |

|                                | results and on the vehicle detail view to support customer-facing presentation by the Sales Representative.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should provide a vehicle search interface supporting filters for: make / brand, product group / model family, model, year, trim, color, price range, stock status, and location.</li> <li>2. The system should surface in-stock, in-transit, and ordered vehicles based on data available in Keyloop.</li> <li>3. The system should support use of a demo or placeholder vehicle representation for quotations where a specific VIN is not yet available.</li> <li>4. The system should support capture of accessories, packages, tint, and customization requests as part of the vehicle selection and quotation process.</li> <li>5. The system should display a primary vehicle thumbnail image alongside each result in the vehicle search output, so the Sales Representative can visually identify the vehicle without opening the detail record.</li> <li>6. The system should expose a full vehicle media gallery on the vehicle detail view, including exterior and interior photographs, 360° image sets where available, model brochures, and active promotional collateral, with support for common image formats (JPEG, PNG) and PDF brochures.</li> <li>7. The system should source vehicle media from Keyloop where the asset is held against the VIN, fall back to OEM / brand-level model media for in-transit, ordered, and demo / placeholder vehicles, and allow authorized users to manually upload or override media on a vehicle record where required.</li> <li>8. The system should allow the selected media (image or brochure) to be attached to or shared from the linked Quotation and customer-facing communications generated against the Opportunity.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a Sales Representative opens the vehicle search, When they apply make, model, and trim filters, Then matching vehicles from Keyloop are returned with their status and location.</li> <li>2. Given no physical VIN is yet available, When the Sales Representative uses a demo vehicle, Then a quotation can be generated against the placeholder without blocking progression.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>Related Personas</b>        | Sales Representative, System                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>User Story</b>              | As a sales user, I should generate quotations in different modes so that the deal can proceed with or without an immediate VIN depending on the scenario.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Requirement Overview</b>    | The system supports two quotation types: Customer Quotation and Bank Quotation, both generated from Salesforce. VIN inclusion on both types is conditional on vehicle stock status — VIN is populated when the vehicle is in stock, and suppressed on both types when the vehicle is non-stock, in transit, or on order. Quotations include accessories, packages, trade-in deductions, and present the deal for customer review before payment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should support generation of two quotation types from Salesforce: Customer Quotation and Bank Quotation. Both types follow the same document structure and are available to the Sales Representative based on customer and deal requirements.</li> <li>2. The system should conditionally include the vehicle VIN on both quotation types based on stock availability: if the vehicle is confirmed as in-stock, the VIN is populated on the quotation; if the vehicle is non-stock, in transit, or on order, the VIN field is suppressed on both quotation types. The Sales Representative may reissue the quotation with the VIN once the vehicle arrives in stock.</li> <li>3. The system should allow quotations to include additional line items for accessories, packages, tint, and upsell elements.</li> <li>4. The system should display approved trade-in values as a negative line item or deduction on the quotation.</li> <li>5. The system should present the quotation to the customer for review before proceeding to payment.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a Sales Representative creates a VIN-based quotation, When they select the VIN-required type, Then the system validates that a VIN is linked before saving.</li> <li>2. Given an early-stage deal does not yet have a VIN, When the Sales Representative creates a non-VIN quotation, Then the system saves it without requiring a VIN.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|                             |                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | 3. Given an approved trade-in value exists, When the quotation is generated, Then the trade-in deduction appears as a line item reducing the total deal value.                                                                                                                                                                                    |
| <b>Assumptions/Comments</b> | 1. Final quotation types, line item structure, and output format to be confirmed during design.<br>9. The list of brands subject to per-VIN pricing (as opposed to variant-level pricing) to be confirmed with finance and IT during design. Integration mapping for per-VIN price sync from Keyloop to be specified in the integration register. |

## 10.7 Discount Approval Workflow

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>User Story</b>              | As a system, I should route discount requests through an approval matrix so that commercial governance is enforced consistently.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Requirement Overview</b>    | Discounts support numeric value and percentage entry. Any discount applied triggers the appropriate approval path based on the delegation-of-authority matrix, potentially escalating to CEO level. Bulk approval actions are supported for executive reviewers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Functional Requirements</b> | 1. The system should support discount entry as a numeric value only. The system should automatically calculate and display the corresponding discount percentage as a read-only derived field on the quotation.<br>2. The system should trigger an approval workflow whenever a Sales Representative applies a discount, routing to the appropriate approver based on the delegation-of-authority matrix.<br>3. The system should support multi-level approval escalation including senior leadership and CEO-level approval for discounts exceeding defined thresholds.<br>4. The system should provide an approval inbox or view supporting bulk review and mass approval actions for authorized approvers managing multiple pending requests. |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Acceptance Criteria</b>  | <ol style="list-style-type: none"> <li>1. Given a Sales Representative applies a discount, When they save the quotation, Then an approval request is automatically routed to the correct approver per the DoA matrix.</li> <li>2. Given a discount exceeds the senior leadership threshold, When the approval chain processes, Then the request escalates to the defined executive approver.</li> <li>3. Given an executive approver has multiple pending discount requests, When they open the approval inbox, Then all pending items are visible and bulk approval actions are available.</li> </ol> |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>1. Final discount matrix and delegation-of-authority thresholds to be supplied by the business before configuration.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## 10.8 Vehicle Reservation with Governance

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>User Story</b>           | As a sales organization, we should be able to reserve vehicles in a governed manner so that stock can be held for customers without losing inventory control.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Requirement Overview</b> | <p>Reservations happen after quotation and link to the opportunity. Standard windows are 3 days (no deposit) and 7 days (with deposit). VIP / extension paths require approval. Pre-order scenarios use a placeholder vehicle.</p> <p>Deposit thresholds are governed by a per-brand / per-business-unit matrix maintained by IT and the business; the system applies one of three scenarios at request time: (1) deposit at or above the threshold proceeds on an auto-flow path, (2) deposit below the threshold is routed for Sales Manager / Showroom Manager approval covering both the reservation and the deposit amount in a single approval, and (3) no-deposit reservations beyond the standard 3-day window (including VIP cases with no fixed expiry) require manager approval. Once the down-payment status is synchronised back from Keyloop / the cashier system as Paid / Verified, the system generates a Reservation Contract assembled from a defined set of Required Documents (linked Quote, Payment Receipt, Customer Identification, Approval reference, Vehicle stock record), records the deposit paid and the remaining balance, sends</p> |

|--|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p>difference as remaining balance on the reservation record.</p> <ol style="list-style-type: none"> <li>11. The system should allow an agreed Trade-In value to be applied as part or whole of the reservation deposit where a Trade-In has been appraised and approved against the same Opportunity.</li> <li>12. The system should allow the Sales Representative to create a Payment record on the reservation with proof of payment attached, and listen for the payment status synchronised from Keyloop / the cashier system, gating contract generation until the payment status is Paid / Verified (the no-deposit 3-day path is exempt).</li> <li>13. The system should reference and link the following Required Documents to the reservation prior to generating the Reservation Contract: the linked Quotation, the Payment Receipt (where a deposit applies), the Customer Identification document (QID, Omani ID, or Passport), the Approval reference (where the request went through manager approval), the Vehicle stock record / VIN, and the Trade-In appraisal record (where applicable). Final Required Documents list to be confirmed (see Assumptions).</li> <li>14. The system should generate the Reservation Contract document containing, at minimum: customer details, vehicle details (make, model, trim, colour, VIN where assigned, price), deposit amount paid, remaining balance, reservation start date, reservation expiry date, payment receipt reference, approval reference where applicable, and a signature block.</li> <li>15. The system should generate the Vehicle Reservation Agreement as a PDF document upon reservation confirmation. The Sales Representative should have the option to print the document for physical ink signature at the dealership or email it to the customer for manual signing and return. Both print and email options must remain available.</li> <li>16. The system should support a configurable expiry-reminder cadence per contract duration, with baseline values of daily reminders for the 3-day contract and daily or every-other-day reminders for the 7-day contract, and no automated reminders for VIP open-ended reservations unless explicitly configured.</li> <li>17. The system should automatically release the vehicle stock hold back to Keyloop inventory when a reservation status moves to Expired or Cancelled,</li> </ol> |

|                     | <p>ensuring the vehicle becomes available again for other Opportunities.</p> <p>18. The system should reflect the signed Reservation Contract as a prerequisite reference when the Opportunity progresses to Sales Order generation, ensuring traceability from reservation through to delivery.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Acceptance Criteria | <ol style="list-style-type: none"> <li>1. Given a Sales Representative initiates a reservation without a deposit, When the reservation is confirmed, Then a 3-day contract is generated.</li> <li>2. Given a deposit is collected, When the reservation is confirmed, Then a 7-day contract is generated.</li> <li>3. Given a VIP extension is requested, When the request is submitted, Then an approval task is created and the reservation status moves to Pending Approval until resolved.</li> <li>4. Given a reservation is approaching expiry, When the configured reminder threshold is reached, Then the customer receives an expiry reminder communication.</li> <li>5. Given the deposit collected is at or above the configured per-brand threshold, When the reservation is submitted, Then the system follows the auto-flow path without manager approval and proceeds to contract generation.</li> <li>6. Given the deposit collected is below the configured per-brand threshold, When the reservation is submitted, Then the system routes the request to the Sales Manager / Showroom Manager for a single approval covering both the reservation and the deposit amount, and on approval proceeds to contract generation.</li> <li>7. Given a reservation is requested with no deposit beyond the standard 3-day window (or as a VIP open-ended reservation), When the request is submitted, Then the system routes it to manager approval before generating the contract.</li> <li>8. Given a manager rejects the reservation request, When the rejection is recorded, Then the reservation is set to Cancelled and the vehicle stock hold is released back to inventory.</li> <li>9. Given the down-payment status is synchronised back as Paid / Verified, When the contract trigger evaluates, Then the system generates the Reservation Contract with all Required Documents linked and presents it to the customer for digital signature.</li> </ol> |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## 10.9 Payment and Deposit Processing

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>User Story Title</b>        | [ALF-RS-09] Payment and Deposit Processing                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Related Personas</b>        | Sales Representative, System                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>User Story</b>              | As a sales user, I should take payments and deposits against the deal so that reservation and sales order progression are financially controlled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Requirement Overview</b>    | The process supports deposit receipt and full payment scenarios. Reservation deposits are tracked against an initial Invoice record. Payment record will be created against the invoice and synced with Keyloop. Once payment is made, Salesforce update the payment status as Paid and Invoice shows partial payment amount. Sales representatives will be required to add payment proof/ receipt to payment record for confirmation.                                                                                                                                                                                                                  |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should support capture of reservation deposit payment.</li> <li>2. The system should track Invoice status at the with values of: Unpaid, Partially Paid, and Fully Paid.</li> <li>3. The system should generate a reservation contract that clearly reflects the amount paid as a deposit and the remaining balance.</li> <li>4. The system should support full payment capture as part of the final deal completion flow.</li> <li>5. The system should generate a Sales Transaction Summary document in parallel with the Sales Order at the point of payment confirmation. The Sales</li> </ol> |

|                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                      | <p>Transaction Summary mirrors the Sales Order layout and is stored against the opportunity record for internal reference.</p> <p>6. The system should allow the Sales Representative to record a payment confirmation on the Salesforce payment record, including attaching the receipt or deposit document issued by the cashier or accounts team in Keyloop. The system should prevent an Opportunity from being set to Closed Won unless all associated payment records are marked as Paid, each carries an attached payment proof, and the sum of all payments equals the full invoice amount.</p> |
| Acceptance Criteria  | <p>1. Given a customer pays a deposit, When the payment is recorded, Then the invoice payment status updates to Partially Paid and the reservation contract reflects the deposit amount.</p> <p>2. Given the full payment is collected, When recorded, Then the payment status updates to Fully Paid and the deal can progress to requesting the order and invoice generation.</p> <p>3. Given a reservation contract is generated, When the customer reviews it, Then it clearly shows the deposited amount, remaining balance, and reservation duration.</p>                                          |
| Assumptions/Comments | <p>1. Detailed payment touchpoints with Keyloop and finance systems to be finalized during technical design. The automated receipt of payment proof as an attachment through Keyloop integration is yet to be confirmed and will be addressed during design workshops. All data structures, field values, and workflow stages within this requirement will be validated against the current Keyloop Autoline/Drive setup to ensure full alignment during the technical design phase.</p>                                                                                                                |

## 10.10 Sales Order and Customer-Order Lifecycle Management

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>User Story</b>              | As a sales organization, we should manage the sales order and customer-order lifecycle so that ordered vehicles can be tracked from confirmation to arrival.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Requirement Overview</b>    | Upon customer agreement to proceed with the deal and confirmation of full payment, the Sales Representative generates the Sales Order — an internal document that succeeds the quotation stage and is stored against the opportunity for internal processing. The Sales Order is not sent to the manufacturer and is not linked to the vehicle ordering process, which is managed separately by the ordering and planning team in Autoline. Vehicle order statuses (Ordered, In Transit, Arrived) are synchronized from Keyloop into Salesforce for Sales team visibility.                                                                                                                                                                                                                                                                                                                                                 |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should support order placement once the required payment and reservation conditions are met.</li> <li>2. The system should synchronize vehicle order statuses from Keyloop into Salesforce.</li> <li>3. The system should surface high-level order states of On Order, In Transit, and In Stock / Arrived in Salesforce, with brand-specific sub-statuses where available.</li> <li>4. The system should prompt the Sales Representative to confirm full payment collection before allowing the generation of the Sales Order document.</li> <li>5. The system should prevent Sales Order generation for opportunities linked to non-stock, on-order, or in-transit vehicles, consistent with the Keyloop Sales Order logic.</li> <li>6. The system should notify customers and internal users of meaningful order progress updates at appropriate stages.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given required payment and reservation conditions are met, When the Sales Representative initiates order placement, Then a sales order record is created and linked to the opportunity.</li> <li>2. Given a vehicle status changes to In Transit in Keyloop, When the synchronization runs, Then the Salesforce order record reflects the In Transit state.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <ol style="list-style-type: none"> <li>Given a vehicle arrives In Stock, When the status syncs, Then the customer receives a progress notification and the sales order is updated.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>For BMW and JLR special orders where the required vehicle is not available in stock, the vehicle ordering and planning team must complete their internal checks and approval before the Sales team can proceed to downpayment collection. The specific approval gate and sequencing for this flow will be confirmed during the solution design phase with Alfardan.</li> <li>Integration with OEM systems for additional vehicle order stages beyond the Keyloop-synchronized statuses (Ordered, In Transit, Arrived) is not in scope for this release and will be treated as a change request if approved by Alfardan.</li> <li>Order state integration scope depends on Keyloop and, for some brands, principal system touchpoints to be validated per brand.</li> </ol> |

| <b>User Story</b>              | As a system, I should support invoicing and deal completion rules so that sales are recognized only when agreed business conditions are met.                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Requirement Overview</b>    | A sold unit is not considered complete until payment, registration, and delivery / signed delivery note conditions are met. Invoice timing aligns to the agreed business and accounting treatment. Closed Won reflects the agreed business rule. Invoices are generated in Keyloop / the DMS; Salesforce triggers the invoicing event and receives the completion confirmation. Salesforce does not generate the final sales invoice independently.                                                                                 |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>The system should enforce that an Opportunity cannot be set to Closed Won until the agreed business conditions are met, including payment, registration, and delivery confirmation.</li> <li>The system should support invoice generation as a step within the deal completion flow by triggering the invoicing event in Keyloop via MuleSoft and receiving the completion confirmation back into Salesforce; Salesforce does not independently generate the legal sales invoice.</li> </ol> |

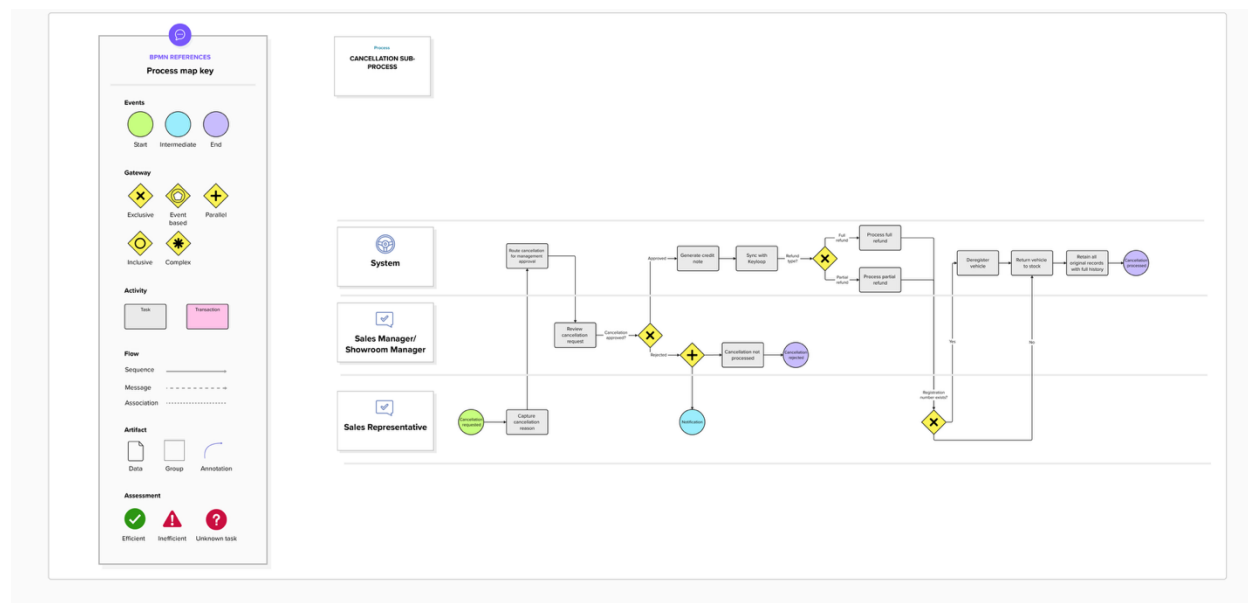

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <ol style="list-style-type: none"> <li>3. The system should check whether the payee name matches the customer/owner name at the invoicing stage. If a mismatch is identified, the Cashier must confirm that a signed NOC is in place before the invoice can be processed. The system should block invoice progression if the payee and owner names do not match and no NOC has been recorded against the opportunity.</li> <li>4. When the payment method is recorded as Cheques, the system should require the Cashier to upload a copy of the cheque as proof of payment before the invoice can be confirmed. This copy is retained for filing purposes and verified by the Cashier during invoicing.</li> <li>5. When the payment method is recorded as Bank Transfer, the system should require the Cashier to upload a copy of the Bank LPO as proof of payment before the invoice can be confirmed. This copy is retained for filing purposes and verified by the Cashier during invoicing.</li> <li>6. The system should record the Closed Won date based on when the agreed completion conditions are satisfied, not on an earlier sales milestone.</li> </ol> |
| <b>Acceptance Criteria</b>  | <ol style="list-style-type: none"> <li>1. Given a Sales Representative attempts to close an opportunity as Won before payment is confirmed, When they submit, Then the system blocks the action and prompts for completion of outstanding conditions.</li> <li>2. Given all completion conditions are met, When the Sales Representative sets the opportunity to Closed Won, Then the stage is accepted and the Closed Won date is stamped.</li> <li>3. Given an invoice is generated, When the deal is complete, Then the invoice trigger is sent to Keyloop and the Salesforce opportunity reflects the confirmed invoiced status.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>1. Closed Won conditions and invoice timing to be validated with Finance before final sign-off. All data structures, field values, and workflow stages within this requirement will be validated against the current Keyloop Autoline/Drive setup to ensure full alignment during the technical design phase.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>User Story Title</b>        | [ALF-RS-12] Vehicle Handover Checklist and Delivery                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Related Personas</b>        | Sales Representative, System                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>User Story</b>              | As a sales user, I should complete a vehicle handover checklist so that delivery is controlled, documented, and customer-ready.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Requirement Overview</b>    | Vehicle handover captures date / time, location, and checklist completion. Customer sign-off is required on delivery / handover documents. CRM follow-up tasks may be generated post-handover for customer experience follow-up.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should support a vehicle handover checklist capturing date, time, location, and required handover items.</li> <li>2. The system should require digital or physical customer sign-off on the delivery / handover documents before the delivery can be confirmed as complete.</li> <li>3. The system should update the sales order to Delivered upon completion of the handover checklist.</li> <li>4. The system should support automated generation of the following handover documents in the agreed sequence at the handover stage: Vehicle Sale Agreement, Warranty Agreement, Service Contract Agreement, Vehicle Repair Disclaimer, and Buyer Acknowledgement. Each document requires physical customer signature, which may be obtained in-person at the dealership.</li> <li>5. The system should provide a manual document generation option allowing the Sales Representative to generate any individual handover document outside of the standard automation sequence at their discretion. Documents generated manually prior to the handover stage will be excluded from the automated trigger at handover to prevent duplication.</li> <li>6. Following Sales Order generation with full payment confirmed, the system should prompt the Sales Representative to upload the completed Traffic Form as an attachment against the opportunity. The Traffic Form is a standard government-issued PDF completed externally and uploaded as a scanned copy; it is not generated by Salesforce.</li> <li>7. Following Sales Order generation with full payment confirmed, the system should prompt the Sales</li> </ol> |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <p>Representative to upload the Insurance Form as an attachment against the opportunity. The Insurance Form is obtained from the relevant insurance provider and uploaded manually; it is not generated by Salesforce.</p> <p>8. The system should generate the Delivery Note after the delivery schedule has been booked and confirmed, as the final document in the handover sequence.</p> <p>9. The system should generate a CRM follow-up task <b>two days after confirmed vehicle handover</b> for customer experience follow-up.</p> |
| <b>Acceptance Criteria</b>  | <p>1. Given a Sales Representative opens the handover checklist, When they complete all items, Then the checklist is saved against the opportunity and sales order.</p> <p>2. Given the customer signs the delivery document, When the signature is captured, Then the handover is confirmed and the sales order status updates to Delivered.</p> <p>3. Given the handover is completed, When the CRM trigger fires, Then a follow-up task is created in the CRM queue for customer experience outreach.</p>                               |
| <b>Assumptions/Comments</b> | <p>1. Detailed checklist content to be authored and provided by the business.</p> <p>2. The exact standard sequence and prerequisites for handover document generation are to be confirmed with Alfardan operations during the solution design phase.</p> <p>3. Digital signature tool / method to be confirmed.</p>                                                                                                                                                                                                                       |

## 10.13 Sales Order Cancellation and Refund Handling

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>Related Personas</b>        | Sales Representative, Sales Manager / Showroom Manager, Finance / System                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>User Story</b>              | As a business, we should handle sales order cancellation and refund scenarios in a controlled way so that exceptions do not break financial and customer records.                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Requirement Overview</b>    | Cancellation is treated as an exception requiring a clear reason, evidence, and approvals. Refund or credit-note handling follows finance policy. Customers may retain funds as credit for another vehicle. Process history is preserved.                                                                                                                                                                                                                                                                                                                                                         |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should require a cancellation reason, supporting evidence, and management approval before a sales order cancellation is processed.</li> <li>2. The system should route cancellation requests through an approval workflow aligned to the cancellation authority matrix.</li> <li>3. The system should support refund or credit-note handling for approved cancellations, according to the agreed finance policy.</li> <li>4. The system should generate a credit note after cancellation and sync it with Keyloop for processing.</li> </ol> |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | 5. The system should retain the original opportunity, sales order, and all related records with full history after cancellation — records must not be deleted.                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Acceptance Criteria</b>  | <ol style="list-style-type: none"> <li>1. Given a cancellation is requested, When the Sales Representative submits it, Then an approval request is created and the cancellation cannot proceed without authorization.</li> <li>2. Given a cancellation is approved, When the refund is initiated, Then the system generates the appropriate refund or credit note linked to the original deal.</li> <li>3. Given a cancellation is processed, When any user views the original opportunity, Then the full history including the cancellation reason and outcome is visible.</li> </ol> |
| <b>Assumptions/Comments</b> | 1. Cancellation policy, supporting documents, and approval authority to be provided by the business and finance team. All data structures, field values, and workflow stages within this requirement will be validated against the current Keyloop Autoline/Drive setup to ensure full alignment during the technical design phase.                                                                                                                                                                                                                                                    |

## 10.14 Lost-Sale Outcome Capture

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>Related Personas</b>        | Sales Representative, CRM Executive / Agent, Marketing User, System                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>User Story</b>              | As a business, we should capture lost-sale outcomes so that pipeline quality, reasons for loss, and future re-engagement can be improved.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Requirement Overview</b>    | Closed Lost can occur at any stage. The system captures lost-sale reason, competitor / alternative outcome, and important notes. Lost-sale data feeds reporting and downstream marketing / re-engagement journeys.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should allow an opportunity to be set to Closed Lost at any stage of the pipeline, not only at the final commit stage.</li> <li>2. When a Sales Representative marks an Opportunity as Closed Lost and selects a loss reason from the pre-defined dropdown, the system should send an approval notification to the Showroom Manager before the Opportunity is formally closed.</li> <li>3. Upon Showroom Manager approval of the Closed Lost status, the system should evaluate the selected loss reason. If the reason is flagged as requiring CRM follow-up, the system should automatically create a CRM</li> </ol> |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <p>follow-up task. If the reason does not require CRM follow-up, the Opportunity is closed with no further action triggered. If the Showroom Manager rejects the Closed Lost request, the Opportunity should revert to its previous active stage and the Sales Representative should be notified to continue working the deal.</p> <ol style="list-style-type: none"> <li>4. The system should require capture of a lost-sale reason, competitor or alternative outcome where known, and any relevant notes before the record is closed.</li> <li>5. The system should make lost-sale data available in reporting and analytics for pipeline quality analysis.</li> <li>6. The system should support use of Closed Lost records as audiences for downstream Marketing Cloud re-engagement journeys. The system should automatically create a follow-up task for the Showroom Manager when an Opportunity is marked as Closed Lost, to allow review of the outcome and a recovery attempt where appropriate.</li> </ol> |
| <b>Acceptance Criteria</b>  | <ol style="list-style-type: none"> <li>1. Given a Sales Representative closes an opportunity as Lost from the Explore stage, When they submit, Then the system accepts the closure and prompts for a lost reason.</li> <li>2. Given a lost reason and competitor are captured, When the record is saved, Then the data is visible in the lost-sale analysis report.</li> <li>3. Given a Marketing user needs to build a re-engagement audience, When they filter for Closed Lost opportunities within a date range, Then the records are available for campaign targeting.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>1. Lost reason picklist values are admin-configurable and to be provided by the business. Each picklist value should be flagged as requiring or not requiring a CRM follow-up task, to drive conditional task creation upon Showroom Manager approval. Exact reversion behaviour and notification content upon Showroom Manager rejection to be confirmed during design. Showroom Managers report directly to the Sales Manager and have visibility of all Opportunities and tasks within their team, governed by the Salesforce role hierarchy configured during design.</li> <li>2. The Marketing Cloud re-engagement journey for Closed Lost opportunities is triggered after a defined delay post-closure, not immediately upon the Opportunity</li> </ol>                                                                                                                                                                                                                  |

|  |                                                                                                   |

| <b>User Story Title</b>        | [ALF-RS-15] Retail Process Dashboards and Reporting                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Related Personas</b>        | Sales Management, CRM Management, System                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>User Story</b>              | As management, we should have dashboards and reports for the retail process so that we can monitor performance, leakage, conversion, and approvals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Requirement Overview</b>    | Reporting covers opportunity progression, quotation activity, discount approvals, reservation aging, lost-sale analysis, and trade-in conversion. Management dashboards support BU and brand-level visibility with appropriate security controls.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should provide management dashboards covering: opportunity stage progression, quotation activity, discount approval status, reservation aging, lost-sale reasons, trade-in conversion rates, lead conversion rates, lost lead volume and reasons, campaign performance attribution, opportunity stage conversion funnel, aged opportunity tracking, and lost-sales recovery outcomes.</li> <li>2. The system should support comparison of showroom traffic / footfall with opportunity creation where the business opts to track both.</li> <li>3. The system should enforce business-unit and brand-level security on dashboard data so that each BU sees only its own metrics unless authorized for cross-BU visibility.</li> <li>4. The system should support configurable date range, BU, brand, and sales representative filters on dashboard and report views.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a Sales Manager opens the opportunity dashboard, When they apply their BU filter, Then they see pipeline progression data for their business unit only.</li> <li>2. Given management needs to review discount approvals, When they open the approval report, Then all pending, approved, and rejected discounts are visible with deal context.</li> <li>3. Given a cross-BU executive opens the top-level dashboard, When authorized access is confirmed, Then</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                            |

|                             |                                                                                                     |
|-----------------------------|-----------------------------------------------------------------------------------------------------|
|                             | they can see consolidated performance across all in-scope business units.                           |
| <b>Assumptions/Comments</b> | 1. Detailed dashboard pack and KPI definitions to be confirmed in a dedicated reporting discussion. |

## 10.16 Internal Requisition Form and PDI Management

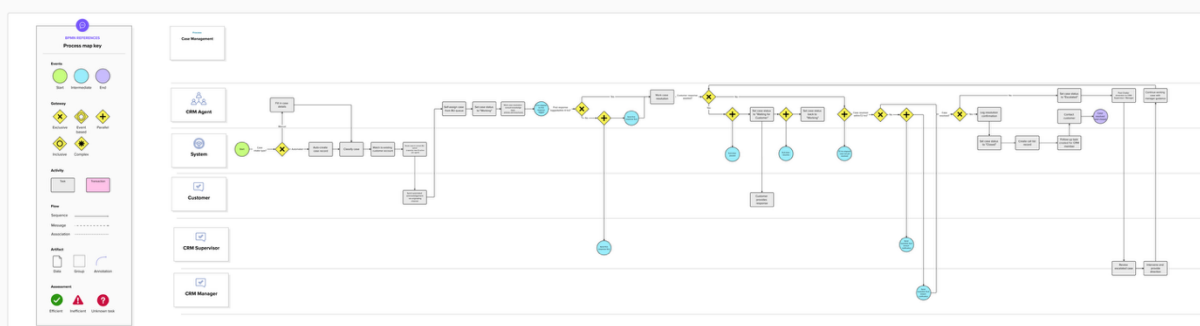

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| <b>Related Personas</b>        | Sales Representative, Sales Manager / Showroom Manager, Aftersales / Workshop Team, System / Integration User                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>User Story</b>              | As a sales user, I should generate an Internal Requisition Form for PDI and accessory fitting requirements so that the After Sales team can action the job in a controlled and traceable manner.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Requirement Overview</b>    | After accessories or PDI requirements are selected against the opportunity, the Sales Representative generates an Internal Requisition Form from Salesforce. The form captures vehicle details, accessory or PDI specifications, and the requested completion date. It is routed for Sales Manager approval before being issued to the After Sales team for action. The cost of the job is estimated internally and does not affect the customer-facing price, which is agreed at quotation stage.                                                                                                                                                                                                                                                                                             |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should allow the Sales Representative to generate an Internal Requisition Form from Salesforce after accessories or PDI requirements have been selected against the opportunity, capturing vehicle details, accessory or PDI specifications, and requested completion date.</li> <li>2. The system should route the Internal Requisition Form for approval by the Sales Manager before it is issued to the After Sales team.</li> <li>3. The system should support distribution of the approved Internal Requisition Form to the After Sales team via email notification from Salesforce.</li> <li>4. The system should allow attachment of the approved Internal Requisition Form to the opportunity record for traceability.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a Sales Representative selects accessories or PDI requirements within the opportunity and triggers form generation, When the Internal Requisition Form is generated, Then the form is created and stored against</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>User Story Title</b>        | [ALF-CM-02] Manual Case Creation                                                                                                                                                                                                                                                                                                                                         |
| <b>Related Personas</b>        | CRM Executive / Agent, System                                                                                                                                                                                                                                                                                                                                            |
| <b>User Story</b>              | As a CRM user, I should create cases manually when needed so that all customer concerns are tracked in Salesforce.                                                                                                                                                                                                                                                       |
| <b>Requirement Overview</b>    | CRM users can manually create cases for walk-in complaints, direct phone calls received via the Cisco CTI integration with screen-pop, and ad hoc customer concerns not captured automatically. Manual case creation captures customer details, summary, business unit, type, category, and notes.                                                                       |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should allow CRM users to create case records manually from within Salesforce for phone interactions, and other non-automated customer contacts.</li> <li>2. The system should require capture of customer details, case summary, case type, category, and supporting notes during manual case creation.</li> </ol> |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <ol style="list-style-type: none"> <li>3. The system should link the manual case to an existing customer Account where one can be identified.</li> <li>4. The system should route manually created cases to the appropriate CRM queue based on business unit and case type. (Matrix TBP)</li> <li>5. The system should screen-pop the matched customer Account or contact in Salesforce when an inbound call is received via the Cisco CTI integration, allowing the CRM agent to greet and authenticate the customer in context before deciding whether to log a case.</li> <li>6. The system should support one-click case creation from a Cisco CTI inbound call screen-pop, with customer identification and contact channel pre-populated from the CTI session metadata.</li> <li>7. The system should automatically log every Cisco CTI inbound and outbound call as an activity record on the linked Account, Lead, Case, or Service Appointment, capturing call direction, duration, and timestamp for full interaction history.</li> </ol> |
| <b>Acceptance Criteria</b>  | <ol style="list-style-type: none"> <li>1. Given a CRM agent receives a walk-in complaint, When they create a case manually and complete required fields, Then the case record is saved and routed to the correct queue.</li> <li>2. Given a manual case is created for a customer with an existing Account, When the agent searches and links the Account, Then the case is associated with the customer profile.</li> <li>3. Given a CRM agent saves a manual case, When the record is created, Then it appears in the appropriate business unit queue for action.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>1. Required field matrix for manual case creation to be provided during technical design phase. Cases, including complaints and resolution outcomes, will be integrated with Keyloop. Depending on the technical alignment, the appropriate mapping matrix will be selected. CRM users interact with customers via phone and digital channels only. Cases arising from walk-in customers should be created by the Receptionist, Sales team, or Aftersales team.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## 11.3 Case Channel Segregation by Business Unit

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>User Story Title</b>        | [ALF-CM-03] Case Channel Segregation by Business Unit                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Related Personas</b>        | System, CRM Supervisor / Manager, System Admin / IT                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>User Story</b>              | As a system, I should segregate case channels by business unit so that routing remains operationally clean.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Requirement Overview</b>    | Each business unit (Alfardan Automobiles, Premier Motors, Sports Motors) has its own support email address, WhatsApp number, and website form. Cases route to the correct BU queue without cross-contamination.                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should support a dedicated email-to-case address for each business unit Alfardan Automobiles, Alfardan Sports Motors and Alfardan Premier Motors, routing incoming emails to the correct BU-specific case queue.</li> <li>2. The system should support a dedicated WhatsApp number or chatbot channel per business unit for case intake.</li> <li>3. The system should support business-unit-specific website inquiry forms that create cases in the correct queue.</li> <li>4. The system should prevent cross-business-unit queue contamination by enforcing BU-level routing rules at case creation.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given an email is sent to the Alfardan Automobiles support address, When the email is processed, Then a case is created and routed to the dedicated business unit queue respectively.</li> <li>2. Given a WhatsApp message is received on the Alfardan Sports Motors channel, When a case is created, Then a case is created and routed to the dedicated business unit queue respectively.</li> <li>3. Given a case is manually created and the agent selects a business unit, When saved, Then the case routes to that BU's queue.</li> </ol>                                                                                |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Final channel inventory and BU-specific contact details to be provided by the business (Emails, WhatsApp Numbers and Form Identifiers for each BU.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## 11.4 Customer and Vehicle Identification in Case Journey

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>User Story Title</b>        | [ALF-CM-04] Customer and Vehicle Identification in Case Journey                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Related Personas</b>        | System, CRM Executive / Agent                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>User Story</b>              | As a system, I should identify customers and vehicles correctly in the case journey so that users work on the right records.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Requirement Overview</b>    | Customer matching uses identifiers such as phone, email, and account data. CRM verifies the customer before performing sensitive actions. VIN is the primary vehicle identifier; plate number is a supported secondary field.                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should perform customer matching during case creation using available identifiers including phone number, email address, and account data.</li> <li>2. The system should prompt the CRM agent to verify the customer identity using the approved identification method before performing sensitive case actions.</li> <li>3. The system should use VIN as the primary vehicle identifier for case linkage and workflow logic.</li> <li>4. The system should support plate number as an optional customer-friendly input field without driving core routing or workflow logic from it.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a case is created and a matching Account is identified by phone or email, When the case is opened, Then the customer profile is surfaced for agent review and linkage.</li> <li>2. Given a vehicle is linked to a case using VIN, When the case record is viewed, Then the correct vehicle details are displayed from the matched asset record.</li> </ol>                                                                                                                                                                                                                                            |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Approved customer identity verification method to be defined by the business.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## 11.5 Consistent Case Classification

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>User Story Title</b>        | [ALF-CM-05] Consistent Case Classification                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Related Personas</b>        | CRM Executive / Agent, System                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>User Story</b>              | As a CRM user, I should classify cases consistently so that routing and reporting are meaningful.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Requirement Overview</b>    | Cases are classified using high-level types of Sales, After Sales, and General, with a detailed subtype / category matrix. Business unit, priority, and routing attributes are also captured on each case.                                                                                                                                                                                                                                                                                                                                                                |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should provide a case type picklist with high-level values of Sales, After Sales, and General.</li> <li>2. The system should support a subtype / category matrix maintained by IT and the business, surfacing appropriate subtypes based on the selected high-level type.</li> <li>3. The system should capture business unit, priority, and other routing-relevant attributes on the case record.</li> <li>4. The system should use classification attributes to drive queue routing and SLA assignment.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a CRM agent creates a case, When they select a high-level type, Then the subtype picklist is filtered to show only relevant subtypes.</li> <li>2. Given a case is classified with business unit and type, When it is saved, Then it routes to the correct queue based on the classification.</li> <li>3. Given management runs a case reporting query by type and subtype, When the report is generated, Then cases are correctly categorized and filterable.</li> </ol>                                                  |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Detailed subtype and category matrix to be provided by the business prior to configuration.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                          |

## 11.6 Queue-Based Case Routing with Capacity Control

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <b>User Story Title</b>        | [ALF-CM-06] Queue-Based Case Routing with Capacity Control                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Related Personas</b>        | System, CRM Executive / Agent, CRM Supervisor / Manager                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>User Story</b>              | As a system, I should route cases through a queue model so that work is controlled and visible.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Requirement Overview</b>    | Cases route to the correct CRM queue by business unit. Capacity-based routing limits each agent to 10 active cases at a time. Additional cases remain in queue until capacity becomes available.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should route all cases to the correct business-unit CRM queue based on classification (Alfardan Automobiles, Premier Motors, Sports Motors).</li> <li>2. The system should enforce capacity-based assignment with a maximum of 10 active cases per CRM agent at any one time.</li> <li>3. The system should hold additional cases in the queue when an agent is at capacity, without routing to a new agent until capacity is freed.</li> <li>4. The system should display current agent capacity and queue depth to CRM supervisors for workload monitoring.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a case is created for Business Unit A, When routing runs, Then it enters the Business Unit A queue and not another BU's queue.</li> <li>2. Given a CRM agent already has 10 active cases, When a new case arrives in the queue, Then it is not assigned to that agent until their active case count drops below 10.</li> <li>3. Given a CRM supervisor opens the queue dashboard, When they review workload, Then agent capacity and queue depth are visible per business unit.</li> </ol>                                                                                    |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Capacity threshold of 10 is a baseline; the business may adjust during configuration.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## 11.7 Case Acknowledgements and Assignment Notifications

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>Related Personas</b>        | System, CRM Executive / Agent                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>User Story</b>              | As a system, I should send acknowledgements and assignments so that both customer and internal user are informed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Requirement Overview</b>    | The system sends an automated customer acknowledgement when a case is created from a supported automated channel. Assigned CRM agents receive in-system notifications upon case routing. Internal notifications use Salesforce notifications rather than email.                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should send an automated acknowledgement communication to the customer when a case is created from website forms, email-to-case, WhatsApp, or social channels.</li> <li>2. The system should notify the assigned or receiving CRM agent in Salesforce when a case is routed to their queue or directly assigned to them.</li> <li>3. The system should use in-system Salesforce notifications as the primary mechanism for agent case assignments, minimizing reliance on email.</li> <li>4. The system should support configurable acknowledgement templates by channel and case type.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a case is created from an automated digital channel, When the record is saved, Then the customer receives an automated acknowledgement via the originating channel.</li> <li>2. Given a case is routed to a CRM agent, When the routing event occurs, Then the agent receives a Salesforce in-system notification.</li> <li>3. Given a manager accesses the acknowledgement template configuration, When they update a template, Then the updated message is used for subsequent cases of that type.</li> </ol>                                                                                         |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Final acknowledgement templates by channel and case type to be authored and provided by the business.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## 11.8 CRM Case Ownership with Internal Collaboration

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>User Story Title</b>        | [ALF-CM-08] CRM Case Ownership with Internal Collaboration                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Related Personas</b>        | CRM Executive / Agent, System                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>User Story</b>              | As a CRM user, I should retain ownership of the case while collaborating internally so that the case lifecycle remains coherent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Requirement Overview</b>    | CRM retains case ownership throughout the resolution lifecycle. Internal collaboration uses Salesforce Chatter and mentions rather than ownership reassignment. Tagged users are notified when their input is required.                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should enforce that the CRM team retains ownership of case records through the resolution lifecycle, even when other departments are engaged for input.</li> <li>2. The system should support Salesforce Chatter posts and @mentions on case records for internal collaboration without changing case ownership.</li> <li>3. The system should notify tagged or mentioned users via Salesforce notifications when their input or action is required on a case.</li> <li>4. The system should log all Chatter collaboration activity on the case timeline for audit and visibility.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a CRM agent needs input from the Sales team on a case, When they post a Chatter mention tagging the Sales user, Then the Sales user receives a notification and the case owner remains the CRM agent.</li> <li>2. Given a Chatter message is posted on a case, When any user views the case record, Then the Chatter thread is visible in the case activity timeline.</li> <li>3. Given a case is in progress, When an admin attempts to change case ownership away from CRM without a valid reason, Then the system requires a supervisor override or approval.</li> </ol>                        |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Collaboration and escalation model to be confirmed with CRM and department leads.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## 11.9 Case Status Lifecycle Management

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>User Story Title</b>        | [ALF-CM-09] Case Status Lifecycle Management                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Related Personas</b>        | CRM Executive / Agent, System                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>User Story</b>              | As a CRM user, I should manage cases through a clear status lifecycle so that closure is controlled and traceable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Requirement Overview</b>    | Cases follow a defined status lifecycle: New, Working, Waiting for Customer, Escalated, and Closed. CRM agents update status as work progresses. Customer confirmation of resolution is required before closure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should enforce a case status lifecycle with values of New, Working, Waiting for Customer, Escalated, and Closed.</li> <li>2. The system should allow CRM agents to move the case status forward within the defined lifecycle as the case progresses.</li> <li>3. The system should require the CRM agent to confirm that the customer has been informed of the resolution before the case status can be set to Closed.</li> <li>4. The system should timestamp each status change and attribute it to the user who made the change for audit purposes.</li> <li>5. Resolution time should be paused if the case is marked as "Waiting for Customer Input"</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a case is created, When it is received in the queue, Then its default status is New.</li> <li>2. Given a CRM agent attempts to close a case, When they initiate the closure, Then the system prompts for confirmation that the customer has been notified of resolution.</li> <li>3. Given a case is set to Closed, When an audit user reviews the case timeline, Then all status changes with timestamps and responsible users are visible.</li> </ol>                                                                                                                                                                                                                   |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Final status list may be adjusted during design based on business unit feedback.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## 11.10 Resolution Confirmation and Customer Feedback Capture

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>User Story Title</b>        | [ALF-CM-10] Resolution Confirmation and Customer Feedback Capture                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Related Personas</b>        | CRM Executive / Agent, System                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>User Story</b>              | As a CRM user, I should confirm resolution and capture customer feedback where required so that service quality can be monitored.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Requirement Overview</b>    | Before or at case closure, CRM confirms resolution with the customer via a confirmation call or check. Follow-up tasks can be created post-closure. Customer feedback is captured manually by phone in the current model.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should require a resolution confirmation check — via a call or similar interaction — to be logged on the case before it can be set to Closed.</li> <li>2. The system should support creation of a follow-up call-list record or task routed back to the CRM queue after case closure for post-resolution follow-up.</li> <li>3. The system should allow CRM agents to capture customer feedback manually by logging the outcome of a feedback call on the case or a linked activity.</li> <li>4. The system should support reporting on customer feedback responses captured across cases.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a CRM agent attempts to close a case, When they have not logged a resolution confirmation interaction, Then the system prevents closure and prompts the agent to complete it.</li> <li>2. Given a case is closed and a follow-up is required, When the agent creates a follow-up task, Then it appears in the CRM queue for the appropriate timing.</li> <li>3. Given feedback is captured after resolution, When a manager runs the feedback report, Then case closure and feedback data are visible and filterable.</li> </ol>                                                                           |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Digital survey capability may be added in a future release but is out of scope for Release 1.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

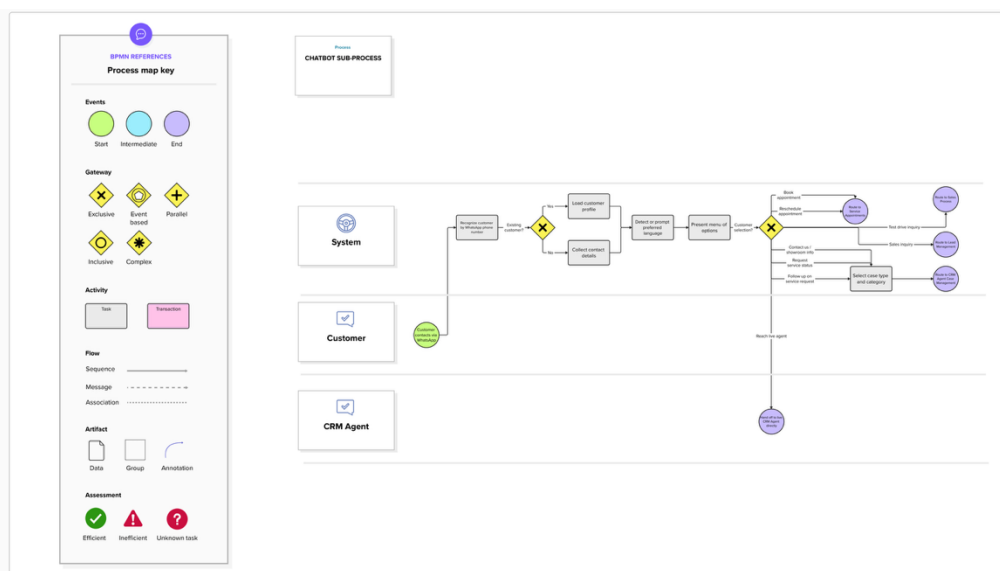

## 11.11 Case SLA Tracking and Aging Visibility

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>User Story Title</b>        | [ALF-CM-11] Case SLA Tracking and Aging Visibility                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Related Personas</b>        | System, CRM Executive / Agent, CRM Supervisor / Manager                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>User Story</b>              | As a system, I should track case SLAs and highlight aging so that management can intervene when needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Requirement Overview</b>    | Case SLAs track first response (4 hours maximum) and final resolution (48–72 hours depending on brand standard). Dashboards show open cases by aging bands and highlight overdue cases for management follow-up.                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should track case SLA milestones for first response time and final resolution time on each case record.</li> <li>2. The system should apply a first response SLA target of 4 hours maximum from case creation.</li> <li>3. The system should support configurable resolution SLA thresholds, with 48-hour and 72-hour windows discussed as the baseline depending on brand and case type.</li> <li>4. The system should surface open cases by aging bands on management dashboards, visually highlighting cases that are approaching or have breached their SLA.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a case is created, When the 4-hour first response threshold approaches, Then the system triggers a reminder notification to the assigned agent.</li> <li>2. Given a case has not been resolved within the configured resolution threshold, When the deadline is reached, Then the case is flagged as overdue in the dashboard.</li> <li>3. Given a manager opens the case dashboard, When they view the aging report, Then cases are grouped by aging bands and overdue cases are visually highlighted.</li> </ol>                                                               |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Resolution SLA thresholds to be confirmed per brand and case type during design.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## 11.12 Internal Case Escalation

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| <b>User Story Title</b>        | [ALF-CM-12] Internal Case Escalation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Related Personas</b>        | CRM Supervisor / Manager, CRM Executive / Agent, System                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>User Story</b>              | As a system, I should support internal case escalation so that sensitive or difficult cases can receive management attention.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Requirement Overview</b>    | CRM agents can escalate cases internally when management attention is needed. Escalation visibility is supported through dashboards, case status, and Chatter. Managers can intervene directly in difficult or sensitive cases.                                                                                                                                                                                                                                                                                                                                |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should allow CRM agents to manually escalate a case to the Escalated status when management attention is required.</li> <li>2. The system should notify the relevant CRM manager or supervisor when a case is escalated.</li> <li>3. The system should provide management with a dedicated escalated cases view or dashboard filter for immediate visibility.</li> <li>4. The system should allow managers to intervene, take ownership actions, or add Chatter commentary on escalated cases.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a CRM agent escalates a case, When the status is set to Escalated, Then the assigned manager receives a Salesforce notification.</li> <li>2. Given a manager opens the escalated cases dashboard, When they filter for Escalated status, Then all escalated cases are visible with key details.</li> <li>3. Given a manager adds a Chatter comment on an escalated case, When they save, Then the agent is notified and the comment is logged on the case timeline.</li> </ol>                                 |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Escalation notification routing (which manager receives escalation by BU) to be confirmed.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                |

## 11.13 WhatsApp / Chatbot Case Journeys

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>User Story</b>              | As a system, I should support WhatsApp / chatbot case journeys so that common inquiries can be handled digitally.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Requirement Overview</b>    | <p>The WhatsApp chatbot serves as the first line of digital engagement for each Alfardan business unit, handling common self-service journeys before escalating to live agents. Each BU operates a dedicated WhatsApp number connected to its own Einstein Bot deployment and Omni-Channel queue. The bot recognizes returning customers by phone number, supports English and Arabic, and manages four customer-facing paths: Service Appointment Inquiry, Service Status Follow-Up, Contact Us / Showroom Information, and Transfer to Live CRM Agent. A Case record is created for every chatbot session and updated throughout. CRM agents can convert WhatsApp cases to leads when a sales inquiry is identified.</p> |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should recognize returning customers on WhatsApp by their registered phone number and surface their profile (name, vehicles, open cases) to the chatbot session context. Unknown customers should be greeted generically and prompted for their name.</li> <li>2. The system should support English and Arabic language selection at the start of each WhatsApp chatbot</li> </ol>                                                                                                                                                                                                                                                                                    |

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p>interaction. The selected language should persist for the entire session.</p> <ol style="list-style-type: none"> <li>3. The system should automatically create a Case record in Salesforce at the start of every WhatsApp chatbot session, linked to the BU-specific queue and WhatsApp channel. The full conversation transcript should be appended to the Case in real time.</li> <li>4. The system should present a main menu to the customer after language selection, with the following options: (1) Service Appointment Inquiry, (2) Service Status Follow-Up, (3) Contact Us / Showroom Information, (4) Transfer to Live Agent.</li> <li>5. Path 1 — Service Appointment Inquiry: The system should guide the customer through vehicle identification, service type selection, and available slot selection (sourced from Keyloop via Salesforce sync). Upon slot confirmation, the system should create a Service Appointment record, close the Case as self-served, and send a booking confirmation to the customer via WhatsApp or email. If no slots are available, the system should offer escalation to a live agent.</li> <li>6. Path 1 — Post-Booking Notifications: The system should send an immediate booking confirmation upon Service Appointment creation, a 24-hour reminder before the appointment, and a configurable 2–3 hour reminder, all via WhatsApp or email per ALF-SA-02.</li> <li>7. Path 2 — Service Status Follow-Up: For known customers, the system should automatically retrieve open Service Appointments and Cases linked to the Account. For unknown customers, the system should prompt for a vehicle plate number or case reference. The system should present the current status in plain language. If status cannot be determined, the system should offer escalation to a live agent.</li> <li>8. Path 3 — Contact Us / Showroom Information: The system should deliver static information including showroom locations, service centre locations, contact numbers/emails, and operating hours per business unit. The Case should be updated with a self-service resolution note and closed upon completion.</li> <li>9. Path 4 — Transfer to Live CRM Agent: The system should support escalation to a live agent when the customer explicitly requests it, when no appointment slots are available, when the customer provides unrecognised input three times consecutively, when</li> </ol> |

|                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                   | <p>service status cannot be determined, or when contact is made outside CRM working hours. On transfer, the system should route the Case to the BU-specific Omni-Channel queue and present the full conversation transcript and customer Account context to the assigned agent.</p> <p>10. Path 4 — Out-of-Hours Handling: When a live agent transfer is requested outside CRM working hours, the system should inform the customer of available hours and offer to record a callback request via the open Case.</p> <p>11. Sales Inquiry — Case-to-Lead Conversion: The system should allow CRM agents to convert a WhatsApp Case into a Lead when the interaction is identified as a genuine sales inquiry. The Lead should be pre-populated with data from the Case (name, phone, BU, channel = WhatsApp, source = Chatbot) and automatically routed to the appropriate Sales Representative via Lead Assignment Rules per BU. The originating Case and the new Lead should be linked via a relationship field.</p>                                                                                                                                                                                                      |
| <p><b>Acceptance Criteria</b></p> | <ol style="list-style-type: none"> <li>1. Given a customer contacts via WhatsApp and their number matches an existing Account, when the chatbot session starts, then the bot greets them by name and surfaces their vehicle, open cases, and last service context.</li> <li>2. Given a customer selects Arabic at the start of a chatbot session, when the chatbot responds, then all subsequent messages in the session are delivered in Arabic.</li> <li>3. Given any customer sends a message to a BU WhatsApp number, when the session is initiated, then a Case record is automatically created and linked to the correct BU queue and channel.</li> <li>4. Given a customer selects Service Appointment Inquiry, when they complete slot selection, then a Service Appointment record is created, the Case is closed as self-served, and a booking confirmation is sent.</li> <li>5. Given no service appointment slots are available, when the customer is informed, then the system offers live agent escalation and routes the Case to the BU queue if the customer accepts.</li> <li>6. Given a customer selects Transfer to Live Agent, when the Omni-Channel transfer is initiated, then the Case is</li> </ol> |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <p>routed to the correct BU queue and the assigned agent sees the full conversation transcript and customer Account details without needing to re-ask the customer.</p> <p>7. Given a CRM agent identifies a WhatsApp case as a sales inquiry, when they initiate case-to-lead conversion, then a Lead record is created with pre-populated Case data, linked to the originating Case, and routed to the appropriate Sales Representative.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>1. WhatsApp Business API account ownership and number provisioning per business unit to be confirmed with Alfardan IT before configuration begins.</li> <li>2. Chatbot journey scripts, decision tree content, and menu copy (in English and Arabic) to be authored by the Alfardan business team and configured during build.</li> <li>3. Showroom and service centre content (addresses, hours, contact numbers per BU) to be provided by Alfardan Marketing / Operations.</li> <li>4. Keyloop / Autoline real-time slot sync feasibility for chatbot appointment booking to be validated during integration design.</li> <li>5. CRM working hours per business unit (for out-of-hours escalation handling) to be defined by Alfardan CRM Operations.</li> <li>6. WhatsApp message template approval (required by Meta for outbound notifications) to be submitted by Alfardan and Arcsen jointly.</li> <li>7. Case-to-Lead conversion quick action design and field mapping to be confirmed during the design phase.</li> <li>8. Einstein Bot Arabic language pack configuration and QA to be included in the build scope.</li> </ol> |

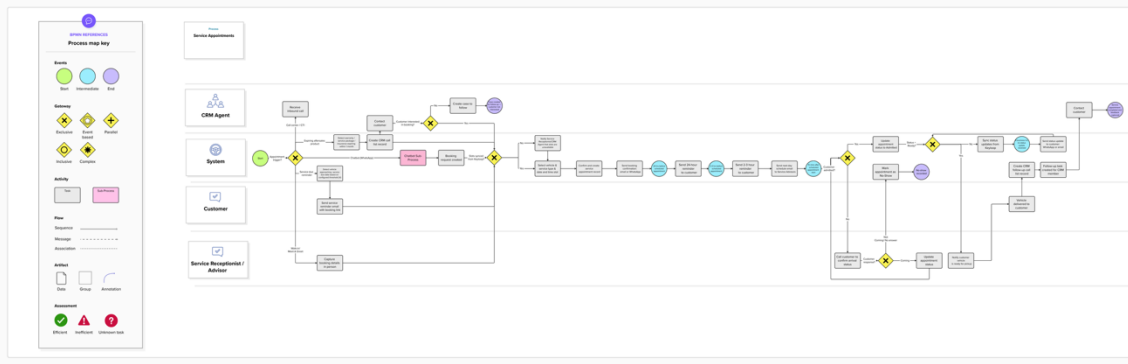

## 11.14 Case Integration Touchpoints

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>User Story</b>              | As a system, I should support case integration touchpoints so that Keyloop platforms and Salesforce remain aligned.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Requirement Overview</b>    | Salesforce supports inbound and outbound case touchpoints with Keyloop system where applicable. MuleSoft handles the integration architecture. Customer and case history is retained in Salesforce regardless of the originating trigger.                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should support inbound case creation from Keyloop system.</li> <li>2. The system should support outbound updates to Keyloop when case status changes require it.</li> <li>3. The system should use MuleSoft as the middleware layer for all case-related integration flows between Salesforce and external platforms.</li> <li>4. The system should retain full customer and case history in Salesforce even when the triggering event originated in an external platform.</li> </ol>                                                                |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given Keyloop system triggers a case creation event, When MuleSoft processes the event, Then a Salesforce case is created with correct classification and customer linkage.</li> <li>2. Given a case status is updated in Salesforce and an outbound update is required, When the integration event fires, Then the status change is reflected in the connected external platform.</li> <li>3. Given a case originated from an external platform, When a CRM agent views the case in Salesforce, Then the full case context and history are visible.</li> </ol> |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Bidirectional integration is to be confirmed in the technical workshops.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## 12. Service Appointments

This section covers Release 1 Service Appointment requirements including booking across all supported channels, confirmation and reminder communications, no-show handling, service status visibility, post-service follow-up, proactive service due reminders, aftersales product expiry follow-up, and meet-and-greet interactions.

### Service Appointments

## 12.1 Service Appointment Request and Booking

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>User Story</b>              | As a customer or internal user, I should be able to request and book a service appointment so that the vehicle can be scheduled using available workshop capacity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Requirement Overview</b>    | Service appointment requests are supported from website, CRM / call center (via the Cisco CTI integration), chatbot / WhatsApp, and walk-in reception. Keyloop remains the source of truth for capacity. Salesforce synchronizes availability and creates the appointment record.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should support service appointment requests from: website booking form, CRM / call center handled through the Cisco CTI integration, WhatsApp chatbot, walk-in at service reception, and Keyloop where applicable.</li> <li>2. The system should synchronize available appointment slots from Keyloop / Autoline to Salesforce in real time or near real time, subject to technical feasibility validation.</li> <li>3. The system should present the list of advisors of the specific maintenance shop along with their availability.</li> <li>4. The system should present maintenance shops availability if no specific advisor has been selected.</li> <li>5. The system should capture the selected maintenance shop to associate with the service appointment.</li> <li>6. The system should collect required booking information including VIN, contact details, relationship to owner, service type, preferred branch, and preferred date/time slot.</li> <li>7. The system should support household / related-contact booking to allow the appointment to be made by the vehicle owner, a family member, chauffeur, or authorized representative.</li> <li>8. The system should create the appointment record in Salesforce and confirm the booking to the customer once a valid slot is selected.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a customer selects a preferred slot via the website or chatbot, When the booking is confirmed, Then a service appointment record is created in Salesforce and the slot is reflected as booked in Keyloop.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <ol style="list-style-type: none"> <li>2. Given a CRM agent books on behalf of a customer by phone, When the agent selects a slot and confirms, Then the appointment is created in Salesforce and the customer receives a confirmation.</li> <li>3. Given a booking is made by an authorized representative (e.g. family member), When the relationship is captured, Then the appointment record reflects both the owner and the booking contact.</li> </ol> |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"> <li>1. Real-time synchronization feasibility with Keyloop to be validated during technical design.</li> <li>2. Service type values may differ by brand and business unit.</li> <li>3. JLR process is the benchmark baseline for appointment booking design.</li> </ol>                                                                                                                                                    |

## 12.2 Booking Confirmations and Appointment Reminders

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>Related Personas</b>        | System, Customer                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>User Story</b>              | As a system, I should send booking confirmations and reminders so that customers are informed of their upcoming service appointments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Requirement Overview</b>    | The system sends a confirmation when the appointment is booked and a reminder 24 hours before. A second reminder (2–3 hours prior) is supported subject to agreement. Email is preferred due to lower cost than WhatsApp.                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should send an automated booking confirmation to the customer via email or WhatsApp immediately upon appointment creation.</li> <li>2. The system should send a reminder communication to the customer 24 hours before the scheduled appointment.</li> <li>3. The system should support a configurable second reminder 2 to 3 hours before the appointment, subject to final business agreement and communication cost considerations.</li> <li>4. The system should respect working-hour and communication-window rules when scheduling reminder sends.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a service appointment is created, When the record is saved, Then the customer receives a booking confirmation via the configured channel.</li> <li>2. Given an appointment is scheduled for tomorrow, When the 24-hour threshold is reached, Then the customer receives a reminder communication.</li> <li>3. Given a second reminder is enabled and the 2–3 hour threshold is reached, When outside of a blocked communication window, Then the system sends the reminder.</li> </ol>                                                                                   |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Email preferred over WhatsApp due to cost; channel strategy to be confirmed per BU.</li> <li>2. Communication windows and blackout periods to be defined by the business.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                           |

## 12.3 No-Show Detection and Follow-Up

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>User Story Title</b>        | [ALF-SA-03] No-Show Detection and Follow-Up                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Related Personas</b>        | System, Receptionist / CRM / Service Team                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>User Story</b>              | As a system and service team, I should identify and follow up on appointment no-shows so that workshop capacity can be managed efficiently and customers can be rescheduled if needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Requirement Overview</b>    | The system detects when an appointment has not progressed within a grace period after the scheduled start time. A notification / task is created for the responsible user to call the customer. A 15-minute grace period is the initial baseline direction.                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should detect when a service appointment has not progressed to the Admitted or Started status within the configured grace period after the scheduled start time.</li> <li>2. The system should create a notification or task for the responsible service reception to contact the customer and confirm their arrival status.</li> <li>3. The system should support a configurable no-show grace period, with 15 minutes as the initial baseline.</li> <li>4. The system should not send automated no-show messages without a manual check, as idle status may reflect an internal delay rather than a customer no-show.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given an appointment passes its scheduled start time and no arrival status update is recorded, When the 15-minute grace period elapses, Then the system creates a task for the assigned user to call the customer.</li> <li>2. Given the task is created, When the user calls the customer and updates the appointment, Then the task is resolved and the appointment status is updated accordingly.</li> <li>3. Given the grace period is reconfigured by an admin, When the new value is saved, Then subsequent no-show detection uses the updated threshold.</li> </ol>                                                                    |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Grace period default of 15 minutes is the most supported initial direction; subject to business confirmation.</li> <li>2. Preferred first action is a manual agent call triggered by system task, not an automated outbound message.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                               |

## 12.4 Service Appointment Status Visibility

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <b>User Story Title</b>        | [ALF-SA-04] Service Appointment Status Visibility                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Related Personas</b>        | System, Service Team, CRM Executive / Agent                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>User Story</b>              | As a user, I should be able to view the service appointment status journey so that customer-facing and aftersales teams can track progress consistently.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Requirement Overview</b>    | The system synchronizes service appointment progress from Keyloop into Salesforce. Minimum status visibility includes Admitted, Started, Awaiting Spare Parts, Washing, and Ready for Pickup, aligned to Keyloop values.                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should synchronize service appointment status updates from Keyloop / Autoline into Salesforce in real time or near real time.</li> <li>2. The system should support a minimum status set of: Admitted, Started, In Progress, Awaiting Spare Parts, Washing, and Ready for Pickup.</li> <li>3. The system should align the Salesforce status values with those used in Keyloop to ensure data consistency.</li> <li>4. The system should surface the current appointment status on the Salesforce appointment record and in relevant CRM and aftersales views.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a vehicle status changes to Admitted in Keyloop, When the synchronization runs, Then the Salesforce appointment record reflects the Admitted status.</li> <li>2. Given an appointment reaches Ready for Pickup status in Keyloop, When the sync event fires, Then the status is updated in Salesforce and relevant users or tasks are notified.</li> <li>3. Given a CRM agent views the appointment record, When they open it, Then the current service status from Keyloop is visible.</li> </ol>                                                                            |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Final status list to be provided and confirmed by the IT / Keyloop team.</li> <li>2. Integration approach and synchronization frequency to be defined in solution design.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                |

## 12.5 Post-Service Follow-Up Task for CRM

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Related Personas</b>        | System, CRM Executive / Agent                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>User Story</b>              | As a CRM user, I should receive a follow-up task after service completion so that I can capture customer feedback and service experience.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Requirement Overview</b>    | When a vehicle is delivered after service, the system creates a call-list or follow-up task for CRM. Agents contact the customer, capture feedback, and the responses are stored in Salesforce for reporting.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should automatically create a follow-up call-list record or task for the CRM team once the vehicle has been delivered or the appointment status reaches a designated completion state.</li> <li>2. The system should assign the follow-up task to the appropriate CRM queue based on business unit.</li> <li>3. The system should allow the CRM agent to log the outcome of the follow-up call and capture survey responses on the task or a linked feedback record.</li> <li>4. The system should support reporting on post-service feedback responses captured across appointments.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a vehicle is delivered and the appointment status updates to the completion state, When the trigger fires, Then a follow-up task is created in the CRM queue.</li> <li>2. Given a CRM agent completes a follow-up call, When they log the feedback, Then the response is stored on the Salesforce record and included in feedback reports.</li> <li>3. Given a manager opens the service feedback report, When they filter by brand or date range, Then the captured feedback data is visible.</li> </ol>                                                                                             |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Survey scripts and question sets differ by brand and must be provided by the business.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## 12.6 Service Due Reminders and Proactive CRM Follow-Up

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>User Story Title</b>        | [ALF-SA-06] Service Due Reminders and Proactive CRM Follow-Up                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Related Personas</b>        | System, CRM Executive / Agent                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>User Story</b>              | As a system, I should generate service due reminders and follow-up tasks so that customers can be contacted at the right time for their next service.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Requirement Overview</b>    | The system reads service-related data from Keyloop and connected vehicle to generate call-list records for vehicles approaching or past service due. Reminders support time-since-last-service, due dates, warranty / service package / insurance expiry, and connected vehicle alerts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should read service due dates, last service dates, warranty expiry, service package expiry, and insurance expiry from Keyloop.</li> <li>2. The system should generate call-list records for the CRM team when a vehicle is approaching or has passed its service due date.</li> <li>3. The system should support reminder triggers based on: time elapsed since last service, approaching service due date, warranty / service package / insurance approaching expiry, Financial Services products approaching expiry, and connected vehicle diagnostic alerts where available.</li> <li>4. The system should support inclusion of a booking link within reminder communications where applicable.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a vehicle is approaching its service due date, When the system processes the trigger, Then a CRM call-list record is created for that customer.</li> <li>2. Given a service package is expiring within the configured lead time, When the trigger fires, Then a reminder task is created and the customer is placed on the call list.</li> <li>3. Given a CRM agent opens the call list, When they see a service due entry, Then the vehicle and service due details are visible to support the customer conversation.</li> </ol>                                                                                                                                                                                  |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Predictive mileage-based service timing is a future analytical capability, out of scope for Release 1.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## 12.7 Expiring Aftersales Product Follow-Up

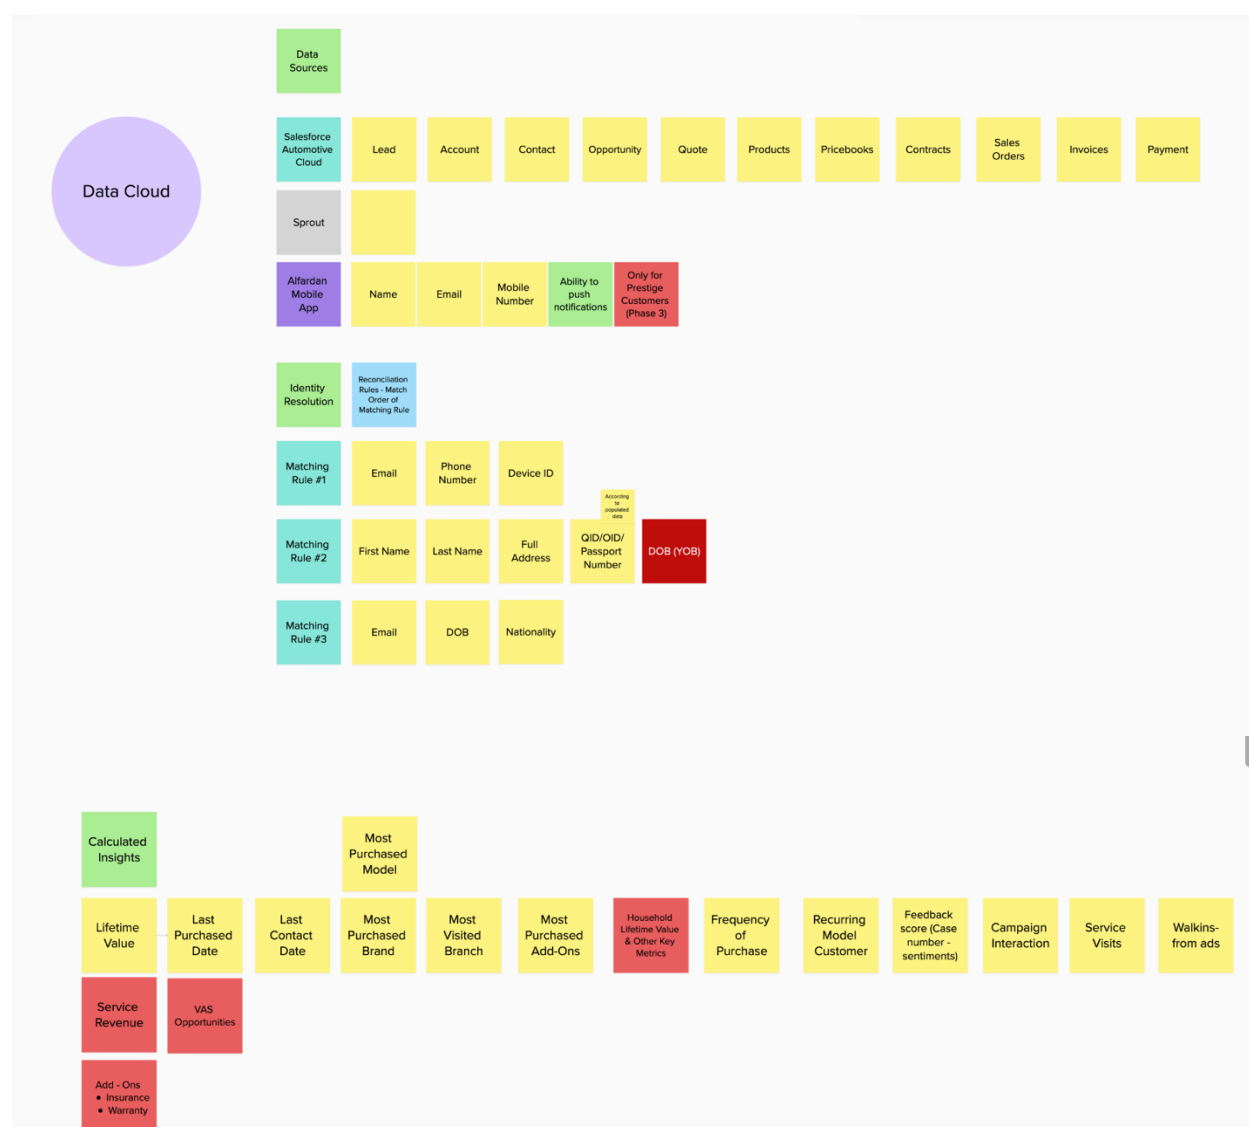

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>User Story Title</b>        | [ALF-SA-07] Expiring Aftersales Product Follow-Up                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Related Personas</b>        | System, CRM Executive / Agent, Service Receptionist / Service Advisor                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>User Story</b>              | As a system and customer-facing team, I should identify expiring aftersales products and trigger follow-up so that the customer can be offered renewal options in time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Requirement Overview</b>    | The system identifies warranty, service package, and insurance products approaching expiry. A call-list record is created one month before expiry. CRM contacts the customer and hands over interested customers to the service team for renewal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should monitor warranty, service package, and insurance expiry dates for vehicles in the customer portfolio.</li> <li>2. The system should create a CRM call-list record one month before the expiry date of each applicable product.</li> <li>3. The system should allow the CRM agent to log the customer's renewal interest and initiate a handover to the service team or service advisor for renewal processing.</li> <li>4. The system should reflect the renewal outcome back into Salesforce once the renewal is completed in Keyloop or the relevant system. The system should create a warranty renewal task 60 days before warranty expiry, assigned to the Sales Representative who originally sold the vehicle if they are still active. If the original Sales Representative is no longer active, the task should be assigned to the Sales Manager for redistribution. If the renewal attempt is unsuccessful, the system should escalate by creating a follow-up task assigned to the Showroom Manager.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a vehicle warranty is expiring in 30 days, When the daily batch runs, Then a CRM call-list record is created for that customer.</li> <li>2. Given a CRM agent contacts the customer and confirms renewal interest, When they update the follow-up record, Then a handover task is created for the service team.</li> <li>3. Given the renewal is completed in Keyloop, When the data is synchronized, Then the Salesforce record reflects the updated expiry date. For customers who were contacted for warranty or service package renewal</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

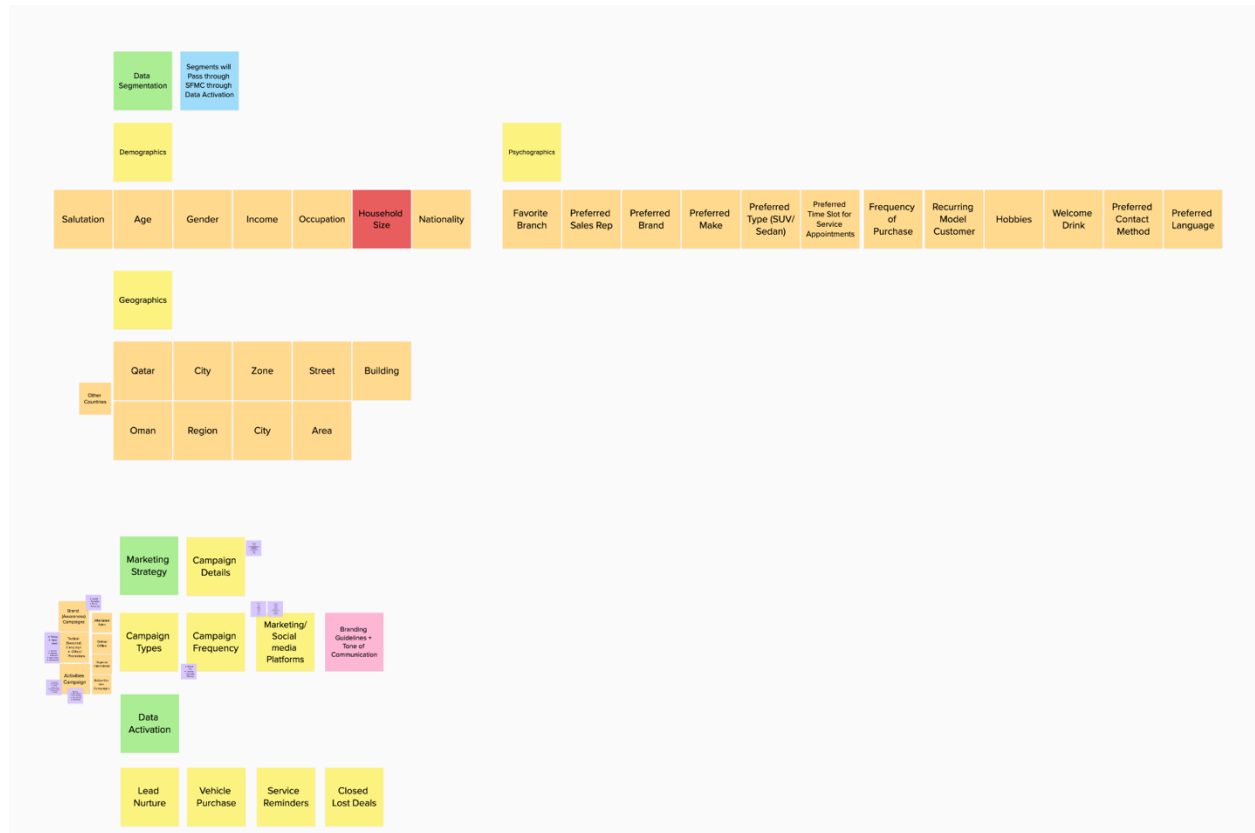

|                             |                                                                                                                                                                                                                                               |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | and declined, the system should trigger two automated follow-up communications: the first seven days before product expiry and the second three days before expiry, delivered via the customer's preferred channel (SMS, WhatsApp, or Email). |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"><li>1. Insurance renewal may involve a separate external process in some cases.</li><li>2. Expiry date data availability and accuracy in Keyloop to be validated during integration design.</li></ol>       |

# 13. Salesforce Data Cloud

Salesforce Data Cloud is a real-time data platform that enables Alfardan Group to unify customer data from multiple sources across all automotive brands into a single, trusted customer profile. It supports the ingestion, resolution, enrichment, segmentation, and activation of customer data to power more personalized marketing and sales engagement.

For Alfardan Group, Data Cloud will serve as the central intelligence layer connecting Salesforce Automotive Cloud with other data sources. The key capabilities in scope are data source connection and ingestion, identity resolution, calculated insights, data segmentation, and data activation.

## 13.1 Data Ingestion

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>User Story Title</b>        | [ALF-DC-01] Data Ingestion – Salesforce Automotive Cloud                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Related Personas</b>        | Marketing Manager, Data Analyst / CRM Analyst, CRM Manager, Salesforce System Administrator                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>User Story</b>              | As a Marketing team member, I should be able to view all data ingested from Salesforce Automotive Cloud in Data Cloud so that I have all necessary customer, vehicle, transactional, and engagement information in one unified platform.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Requirement Overview</b>    | This requirement covers the ingestion of data into Salesforce Data Cloud from Salesforce Automotive Cloud. The objective is to create a comprehensive, centralized data foundation across all Alfardan automotive brands to support identity resolution, calculated insights, segmentation, and activation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should connect Salesforce Data Cloud to Salesforce Automotive Cloud via the native Salesforce CRM connector.</li> <li>2. The system should ingest data from Salesforce Automotive Cloud objects including Lead, Account, Contact, Opportunity, Quote, Products, Pricebooks, Contracts, Sales Orders, Invoices, and Payments.</li> <li>4. The system should store all ingested data within the relevant Data Cloud data model objects.</li> <li>5. The system should support historical data ingestion for the agreed scope.</li> <li>6. The system should support recurring / scheduled data ingestion for new and updated records.</li> <li>7. The system should map source attributes to corresponding Data Cloud structures per the approved source-to-target mapping.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given the Salesforce CRM connector is configured, when the scheduled ingestion runs, then all in-scope Automotive Cloud objects should be available in Data Cloud.data from the app should be available in Data Cloud.</li> <li>3. Given source-to-target mappings are approved, when data is ingested, then all mapped fields should be populated in the corresponding Data Cloud structures.</li> <li>4. Given historical data is provided, when historical ingestion is completed, then records for the agreed period should be accessible in Data Cloud.</li> </ol>                                                                                                                                                                                                                         |

|                             |                                                                                                                                                                                                                                                                         |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"><li>1. Salesforce Automotive Cloud source object access, integration credentials, and source-to-target mappings will be confirmed during the design phase.</li><li>3. Data cleansing within source systems is out of scope.</li></ol> |

| <b>User Story Title</b>        | [ALF-DC-02] Identity Resolution – Unified Customer Profile                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Related Personas</b>        | Marketing Manager, Data Analyst / CRM Analyst                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>User Story</b>              | As a Marketing team member, I should be able to have customer records from all ingested sources matched and unified in Data Cloud so that I can rely on a single golden customer profile for segmentation, targeting, journey execution, and analysis across all Alfardan automotive brands.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Requirement Overview</b>    | This requirement covers the configuration of Identity Resolution in Salesforce Data Cloud to match and unify customer records ingested from Salesforce Automotive Cloud. The objective is to eliminate duplicate customer profiles and establish a trusted, unified customer view that serves as the foundation for all downstream marketing and sales activities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should configure Identity Resolution rules within Data Cloud for customer profile unification.</li> <li>2. Matching rules should be applied in the following priority order: 1.(Email address + Phone Number + Device ID) , 2.(First Name + Last Name + QID , and 3 (Email address + DOB + Nationality).</li> <li>3. The system should support additional matching dimensions including Date of Birth (DOB/YOB) combined with Email and Device ID.</li> <li>4. The system should unify matched records into a single customer profile (golden record).</li> <li>5. The system should retain source record links for traceability.</li> <li>6. The system should apply reconciliation rules based on the agreed match-order priority.</li> <li>7. The system should make unified profiles available for downstream segmentation, calculated insights, and activation. The system should support the identification and flagging of VIP customer profiles on the Account record, based on a criteria matrix to be defined and provided by the business. The VIP flag should be visible to all relevant Salesforce users across all in-scope processes.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given records with the same email exist across sources, when Identity Resolution runs, then they should be unified into a single customer profile.</li> <li>2. Given records match on phone number but not email, when Identity Resolution runs, then they should be unified accordingly.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|                             |                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <p>3. Given records match on name + full address, when Identity Resolution runs, then those records should be unified into one profile. when Identity Resolution runs, then the app identity should be linked to the corresponding CRM profile.</p> <p>5. Given no matching rule is satisfied, when Identity Resolution runs, then the record should be retained as a separate profile.</p> |
| <b>Assumptions/Comments</b> | <p>1. Matching rule thresholds and fuzzy matching tolerance will be confirmed during the design phase.</p> <p>2. Customer data may originate from multiple Alfardan brand CRM instances and should be unified under a single household or individual profile per agreed logic.</p>                                                                                                          |

| <b>User Story</b>              | As a Marketing team member, I should be able to view calculated customer and household insights in Data Cloud so that I can better understand customer value, purchase behaviour, service engagement, and brand preferences for targeted campaigns and analysis across Alfardan's automotive brands.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Requirement Overview</b>    | This requirement covers the configuration of Calculated Insights in Salesforce Data Cloud to derive meaningful customer-level and household-level metrics from ingested Automotive Cloud data. These insights will power segmentation, journey entry criteria, personalisation, and business reporting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should calculate and expose customer-level insights including Lifetime Value, Household Lifetime Value, Last Purchased Date, Last Contact Date, Most Purchased Brand, Most Purchased Model, and Most Purchased Add-Ons.</li> <li>2. The system should calculate preference-based insights including Preferred Brand / Make / Type, Preferred Sales Representative, Preferred Branch, and Preferred Time Slot for Service Appointments.</li> <li>3. The system should calculate behavioural and revenue insights including Frequency of Purchase, Service Revenue, VAS Opportunities, Feedback Score, Campaign Interaction Score, and Service Visits Count.</li> <li>4. The system should calculate insights based on approved business definitions agreed during the design phase.</li> <li>5. Insights should be refreshed on the agreed schedule following source data ingestion.</li> <li>6. Insights should be available for downstream segmentation, activation, and journey personalisation.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given ingested CRM and app data is available, when calculated insights run, then all in-scope metrics should be computed and available in Data Cloud.</li> <li>2. Given a customer has multiple purchases across brands, when Lifetime Value is calculated, then it should reflect the total across all brands and categories.</li> <li>3. Given new data is ingested, when the next insight refresh runs, then values should be updated accordingly.</li> <li>4. Given insights are calculated, when a Marketing user</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|                             |                                                                                                                                                                                                                                        |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | accesses Data Cloud, then they should be able to view and use the insights for segmentation and activation.                                                                                                                            |
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"><li>1. Final business definitions for each insight will be confirmed during the design phase.</li><li>2. Dashboarding and external BI reporting are out of scope unless explicitly agreed.</li></ol> |

## 13.4 Data Segmentation & Activation

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <b>Related Personas</b>        | Marketing Manager, Marketing Executive / CRM Executive, Data Analyst / CRM Analyst                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>User Story</b>              | As a Marketing team member, I should be able to create customer segments in Data Cloud and activate them into Salesforce Marketing Cloud journeys so that I can run targeted, personalised campaigns based on customer profile, vehicle purchase history, service behaviour, and campaign preferences across all Alfardan automotive brands.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Requirement Overview</b>    | This requirement covers the creation of customer segments in Salesforce Data Cloud based on agreed profile, transactional, behavioural, and psychographic attributes, and the activation of those segments into Marketing Cloud for downstream journey execution.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Functional Requirements</b> | <p>2. The system should create and maintain customer segments based on geographic criteria including Qatar City, Zone, Street, Building, Oman Region, City, Area, and Other Countries.</p> <p>3. The system should create and maintain customer segments based on psychographic criteria including Hobbies, Lifestyle, Preferred Contact Method, and Preferred Language.</p> <p>4. The system should create and maintain segments based on Purchase Behaviour, Service Behaviour, Campaign Engagement, and Preferred Sales Representative.</p> <p>5. The system should activate segments from Data Cloud into Marketing Cloud for Lead Nurture, Sales Nurture, Vehicle Purchase / Upselling, Post-Sale, Service Reminder, and Closed Lost Opportunity journeys.</p> <p>6. The system should refresh segment membership per the agreed processing schedule.</p> <p>7. Activated audiences should be available in Marketing Cloud for journey entry criteria.</p> |
| <b>Acceptance Criteria</b>     | <p>1. Given customer data is available in Data Cloud, when segment configuration is completed, then the system should create segments based on the approved criteria.</p> <p>2. Given segmentation rules include multiple criteria, when the segment is evaluated, then only customers meeting all configured conditions should be included.</p> <p>3. Given source data changes, when the next segment</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

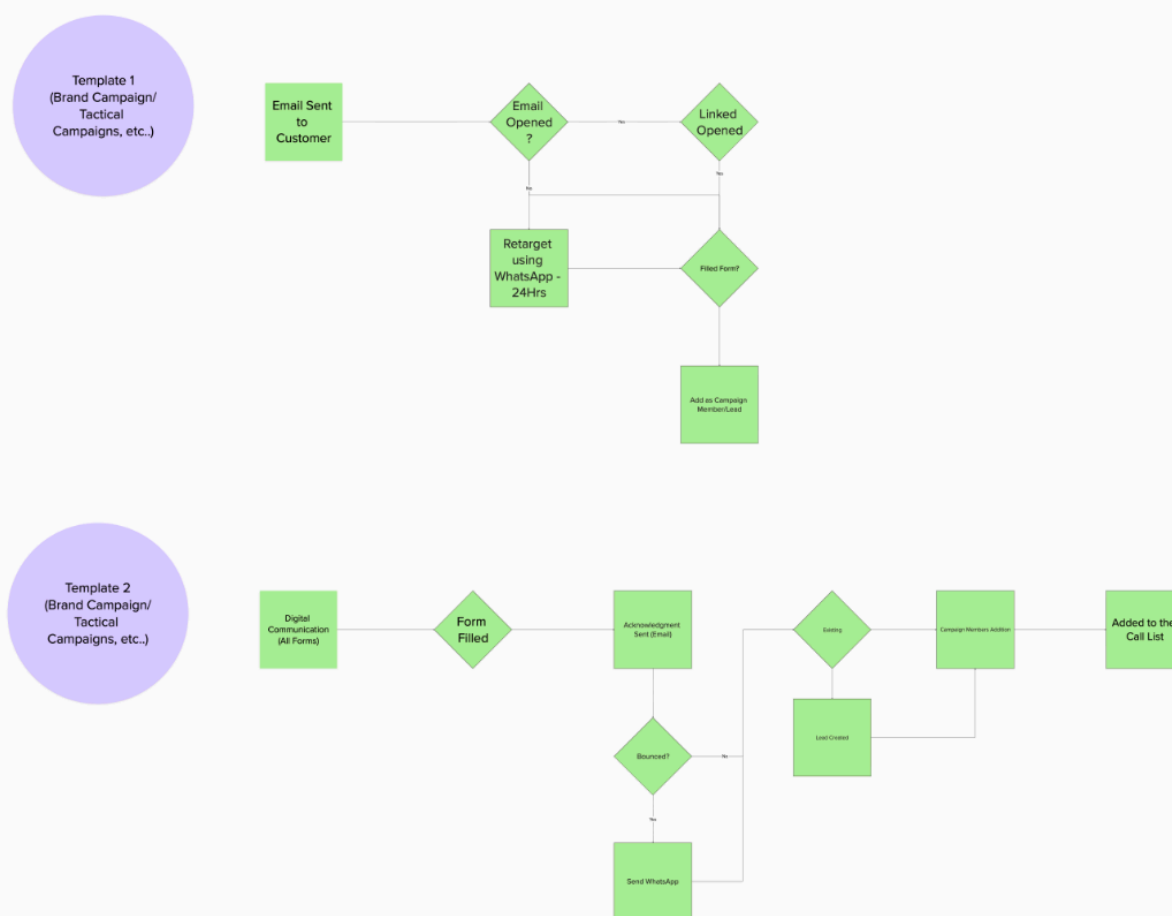

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <p>refresh runs, then segment membership should be updated accordingly.</p> <p>4. Given segments are created, when Data Activation is executed, then segments should be available in Marketing Cloud for journey entry.</p> <p>5. Given an activated segment is available in Marketing Cloud, when a Marketing user configures a journey, then the segment should be selectable as an entry audience for the relevant journey.</p> |
| <b>Assumptions/Comments</b> | <p>1. Detailed segment logic thresholds will be confirmed during the design phase.</p> <p>2. Campaign Type and Medium segmentation criteria will be aligned during workshop sessions.</p>                                                                                                                                                                                                                                          |

## 14. Salesforce Marketing Cloud

Salesforce Marketing Cloud is the digital marketing execution platform that will enable Alfardan Group to deliver personalised, multi-channel customer communications across the entire vehicle ownership lifecycle. It will orchestrate journeys, manage campaigns, and engage customers across Email, WhatsApp, Push Notifications, and digital advertising platforms.

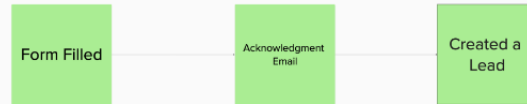

Marketing Cloud will be tightly integrated with Salesforce Data Cloud for segment-driven journey entry and Salesforce Automotive Cloud for lead, opportunity, and case status updates. It will also connect to Sprout Social for social media management and relevant digital advertising platforms.

| <b>User Story</b>              | As a Marketing team member, I should be able to plan and manage the annual campaign calendar in Marketing Cloud so that I can schedule, organise, and execute all marketing activities across the required communication channels in a consistent, brand-aligned, and coordinated manner across Alfardan's automotive brands.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Requirement Overview</b>    | This requirement covers the ability to define and manage a yearly marketing campaign calendar within the Alfardan Marketing Cloud operating model.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should support annual campaign calendar planning and management with campaign attributes including Campaign Name, Campaign Objective, Campaign Type &amp; Subtype, Campaign Period, Target Audience or Segment Reference, Communication Channels, Campaign Frequency, and Campaign Status.</li> <li>2. The system should support campaign types including Brand Awareness, Tactical / Seasonal, Offers &amp; Promotions, Online / Offline Model Campaigns, Aftersales campaigns, Activities, Affinity Partnerships, Referral Activities, Receptions, Display, Sponsorship, Roadshow, and Regional / International Launch campaigns.</li> <li>3. The system should support capture of campaign performance metrics including Cost of Campaign, Generated Leads, Generated Sales, ROI, CPL, Lead Quality, Timestamp Age, Campaign Duration, Lost Reasons, Source, and Medium.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given an authorized Marketing user creates a campaign, then the system should allow capture of all required campaign attributes within the annual calendar.</li> <li>2. Given a campaign is configured, when the user selects one or more channels, then the system should associate the campaign with the selected channels.</li> <li>3. Given a campaign exists, when an authorized user updates details, then the system should save the updated campaign information.</li> <li>4. Given campaign records exist, when downstream processes reference campaign data, then the system should make campaign details available for execution planning.</li> </ol>                                                                                                                                                                                                                                  |

|                             |                                                                                                                                                                                                                                                                                                                                               |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Assumptions/Comments</b> | <ol style="list-style-type: none"><li>1. Campaign template designs will be aligned with Alfardan's branding guidelines and tone of communication.</li><li>2. Campaign frequency for prestige customer journeys is out of scope for Phase 1.</li><li>3. The Ministry approval process for visual uploads will be handled externally.</li></ol> |

| <b>User Story</b>              | As a Marketing team member, I should be able to automatically trigger and manage a Sales Nurture Journey when an Opportunity is created in Salesforce so that the Sales Representative can follow up with the prospect and I can support re-engagement through automated communications when the prospect is unresponsive.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Requirement Overview</b>    | This requirement covers the setup of a Sales Nurture Journey triggered upon Opportunity creation in Salesforce Automotive Cloud.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should trigger the Sales Nurture Journey when an Opportunity is created in Salesforce Automotive Cloud.</li> <li>2. The system should assign a Call Task to the relevant Sales Representative upon journey entry.</li> <li>3. The system should evaluate whether the Sales Representative has indicated No Response from the prospect.</li> <li>4. If No Response is indicated, the system should send a follow-up email to the customer with a preferred time-slot selection link.</li> <li>5. If the customer clicks the link and selects a slot, a new Call Task should be created and assigned to the Sales Representative.</li> <li>6. If the customer does not open or click within the configured window, the system should retarget the customer via WhatsApp.</li> <li>7. If no response is received after the configured follow-up period, the system should mark the Opportunity as Closed Lost and trigger the Closed Lost Opportunity Journey.</li> <li>8. The system should use Email and WhatsApp message templates aligned to Alfardan's branding guidelines.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given an Opportunity is created, when the journey is triggered, then a Call Task should be assigned to the Sales Representative.</li> <li>2. Given the Sales Representative marks No Response, when the journey evaluates the condition, then a follow-up email with time-slot selection should be sent.</li> <li>3. Given the customer clicks the time-slot link, when the</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|                             |                                                                                                                                                                                                                                                                                                                          |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <p>slot is selected, then an updated Call Task should be created for the Sales Representative.</p> <p>4. Given the customer does not respond within the configured period, when the journey evaluates the no-response path, then the Opportunity should be marked Closed Lost and the Closed Lost Journey triggered.</p> |
| <b>Assumptions/Comments</b> | <p>1. Opportunity creation triggers and Salesforce Automotive Cloud API connectivity will be confirmed during the design phase.</p> <p>2. Email and WhatsApp templates are subject to Alfardan's branding and tone approval.</p> <p>3. Time-slot selection mechanism will be agreed during detailed design.</p>          |

## 14.3 Vehicle Purchase & Upselling Journey

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>User Story Title</b>        | [ALF-MC-03] Vehicle Purchase & Upselling Journey                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Related Personas</b>        | Marketing Executive / CRM Executive, Data Analyst / CRM Analyst                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>User Story</b>              | As a Marketing team member, I should be able to automatically trigger an upselling campaign for customers who are eligible based on purchase recurrence or time since last invoice so that I can drive repeat vehicle purchases and create new Opportunities in Salesforce.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Requirement Overview</b>    | This requirement covers the setup of an automated Upselling Journey in Marketing Cloud, triggered when 1 year has passed since a customer's last vehicle invoice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should trigger the Upselling Journey when 1 year has passed since a customer's last vehicle invoice, as calculated by the Calculated Insight Last Purchased Date.</li> <li>2. The system should evaluate whether the customer is a Recurring Model Customer before entry.</li> <li>3. The system should send an upselling email to the customer with a vehicle brochure link.</li> <li>4. If the email is not opened, the system should retarget the customer via WhatsApp after 3 days.</li> <li>5. If the customer clicks the brochure link via email or WhatsApp, the system should create an Opportunity in Salesforce and assign it to a Sales Representative.</li> <li>6. If the customer does not engage after retargeting, the customer should exit the journey.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given 1 year has passed since the last invoice, when the journey trigger evaluates, then eligible recurring customers should enter the Upselling Journey.</li> <li>2. Given an upselling email is sent, when the customer opens it and clicks the brochure link, then a new Opportunity should be created and assigned to Sales.</li> <li>3. Given the email is not opened, when 3 days elapse, then a WhatsApp retargeting message should be sent.</li> <li>4. Given no engagement occurs after retargeting, when the journey end condition is met, then the customer should exit without further follow-up.</li> </ol>                                                                                                                                                                       |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Brochure link content and vehicle model targeting logic will be agreed with the Alfardan marketing team during the design phase.</li> <li>2. Opportunity creation via Marketing Cloud API will be confirmed with the Salesforce implementation team.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

## 14.4 Post-Sale Journey

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>User Story Title</b>        | [ALF-MC-05] Service Reminder Journey – Service Appointment Scheduling                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Related Personas</b>        | CRM Executive                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>User Story</b>              | As a CRM team member, I should be able to automatically trigger a Service Reminder Journey 3 months after a customer's last service so that I can encourage timely service bookings, increase aftersales revenue, and drive service appointment creation in Salesforce.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Requirement Overview</b>    | This requirement covers the setup of an automated Service Reminder Journey in Marketing Cloud triggered 3 months after a customer's last service visit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should trigger the Service Reminder Journey 3 months after the customer's last service visit.</li> <li>2. The system should evaluate whether the customer has a valid email address.</li> <li>3. If email is available, the system should send a service reminder email with an appointment booking link.</li> <li>4. If the email is not opened, the system should retarget the customer via WhatsApp after 3 days.</li> <li>5. If the customer clicks the booking link via email or WhatsApp, the system should create a Service Appointment in Salesforce.</li> <li>6. A confirmation email should be sent to the customer once the appointment is created.</li> <li>7. The system should also support a Service Promotion Campaign path for customers eligible for service promotions.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given 3 months have passed since last service, when the journey trigger evaluates, then the eligible customer should enter the Service Reminder Journey.</li> <li>2. Given the reminder email is sent and opened, when the customer clicks the booking link, then a Service Appointment should be created in Salesforce.</li> <li>3. Given the email is not opened, when 3 days elapse, then a WhatsApp reminder should be sent.</li> <li>4. Given a Service Appointment is created, when confirmed, then a confirmation email should be sent to the customer.</li> </ol>                                                                                                                                                                                                                                        |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Service Appointment creation in Salesforce will be via API or native connector.</li> <li>2. Service booking link and appointment availability logic will be confirmed with the Alfardan aftersales operations team.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## 14.6 Lost Opportunity Journey

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Related Personas</b>        | Sales Representative, CRM Executive / Agent, CRM Supervisor / Manager                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>User Story</b>              | As a CRM team member, I should be able to automatically trigger a Closed Lost Journey when an Opportunity is marked as Closed Lost in Salesforce so that I can attempt to re-engage the customer and understand the reason for the lost deal.                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Requirement Overview</b>    | This requirement covers the Closed Lost Opportunity Journey triggered when an Opportunity is marked as Closed Lost in Salesforce Automotive Cloud.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should trigger the Closed Lost Journey when an Opportunity is updated to Closed Lost status in Salesforce Automotive Cloud.</li> <li>2. The system should send a Closed Lost email to the customer.</li> <li>3. If the email is not opened, the system should retarget the customer via WhatsApp after 3 days.</li> <li>4. If the customer clicks the Case link in the communication, the system should create a Case in Salesforce with customer dissatisfaction / feedback details.</li> <li>5. If the customer does not engage after the retargeting period, the customer should exit the journey.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given an Opportunity is marked Closed Lost, when the journey trigger is evaluated, then the customer should enter the Closed Lost Journey.</li> <li>2. Given the email is sent, when the customer does not open it, then a WhatsApp retargeting message should be sent after 3 days.</li> <li>3. Given the customer clicks the Case link, when the interaction is registered, then a Salesforce Case should be created capturing feedback details.</li> <li>4. Given no engagement occurs after retargeting, when the journey end condition is met, then the customer should exit the journey.</li> </ol>                   |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Case creation upon customer click will be via Salesforce API or native connector.</li> <li>2. Case categorisation and lost-reason mapping will be confirmed with Alfardan's CRM team.</li> <li>3. Email and WhatsApp template content will be aligned with branding guidelines.</li> </ol>                                                                                                                                                                                                                                                                                                                                  |

## 14.7 Lead Nurture Journey

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <b>User Story Title</b>        | [ALF-MC-07] Lead Nurture Journeys – Inbound, Outbound, Unreachable & Inactive Leads                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Related Personas</b>        | Marketing Executive, Sales Representative, CRM Executive / Agent, CRM Supervisor / Manager                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>User Story</b>              | As a Marketing team member, I should be able to automatically manage lead nurturing journeys for inbound and outbound leads so that all leads receive timely, relevant communications, and Sales Representatives are supported with structured follow-up tasks and preferred contact time-slot scheduling.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Requirement Overview</b>    | This requirement covers four Lead Nurture Journey templates within Marketing Cloud: Outbound Campaign Leads, Inbound Leads, Unreachable Leads, and Inactive Leads.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. For Outbound Campaign Lead journeys, the system should trigger when a lead is generated from a digital campaign.</li> <li>2. If an email is sent but bounced, the system should send a WhatsApp message and add the lead to the Call List.</li> <li>3. If an email is not bounced, the system should evaluate whether the email was opened and the form was filled.</li> <li>4. If the form is filled, the system should add the person as Campaign Member / Lead in Salesforce and send an acknowledgement email.</li> <li>5. For Inbound Lead journeys, the system should send an acknowledgement email, create a Lead in Salesforce, and send a product-specific auto-reply email based on Model of Interest.</li> <li>6. For Unreachable Lead journeys, the system should trigger on the 2nd day after lead creation with no sales-rep contact, send a follow-up email with preferred time-slot selection, create follow-up tasks, and retarget via WhatsApp if needed.</li> <li>7. For Inactive Lead journeys, the system should trigger 30 days after a lead has been rejected or gone inactive, send a re-engagement email, revive the lead if engagement is detected, and create a task for the lead owner.</li> <li>8. Given no engagement after all retargeting steps, the system should mark the lead as Lost / Attempt Failed.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a lead is created from an outbound campaign, when the journey is triggered, then the appropriate lead communication path should be executed.</li> <li>2. Given a form is submitted inbound, when the lead</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <p>journey is triggered, then an acknowledgement email and product-specific auto-reply should be sent.</p> <p>3. Given a lead is unreachable on Day 2, when the journey trigger evaluates, then a time-slot selection email should be sent and follow-up tasks created per the defined schedule.</p> <p>4. Given a lead has been inactive for 30 days, when the inactive lead journey triggers, then a re-engagement email should be sent and the lead status updated to Revived if engagement is detected.</p> <p>5. Given no engagement after all retargeting steps, when the journey end condition is met, then the lead should be marked as Lost / Attempt Failed.</p> |
| <b>Assumptions/Comments</b> | <p>1. Lead source tracking will be configured per campaign to capture attribution correctly.</p> <p>2. WhatsApp message templates are subject to WhatsApp Business approval.</p> <p>3. Preferred time-slot mechanism and lead-status field values will be confirmed with the Alfardan CRM team.</p>                                                                                                                                                                                                                                                                                                                                                                        |

## 14.8 Preference Center

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>User Story Title</b>        | [ALF-MC-08] Preference Centre – Communication Opt-In Management                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Related Personas</b>        | Marketing Manager, Marketing Executive / CRM Executive                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>User Story</b>              | As a Marketing team member, I should be able to manage customer communication preferences in Marketing Cloud so that customers can control whether they receive Transactional or Marketing communications, and so that Alfardan remains compliant with customer consent preferences.                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Requirement Overview</b>    | This requirement covers the setup of a Preference Centre in Salesforce Marketing Cloud that allows customers to opt in or out of communication categories.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Functional Requirements</b> | <ol style="list-style-type: none"> <li>1. The system should support a Preference Centre accessible to customers via a link in email communications.</li> <li>2. The system should support two primary communication categories: Transactional and Marketing.</li> <li>3. The system should allow customers to opt in or out of each communication category independently.</li> <li>4. The system should enforce customer preferences in journey execution, suppressing marketing communications for opted-out customers.</li> <li>5. The system should support Email and WhatsApp preference management independently.</li> <li>6. The system should log preference changes with a timestamp for audit purposes.</li> </ol> |
| <b>Acceptance Criteria</b>     | <ol style="list-style-type: none"> <li>1. Given a customer accesses the Preference Centre, when they update their preferences, then the system should save their updated opt-in / opt-out status.</li> <li>2. Given a customer opts out of Marketing communications, when a marketing journey is executed, then the system should suppress the communication to that customer.</li> <li>3. Given a customer opts out of a specific channel, when a journey sends via that channel, then the system should not send the communication.</li> </ol>                                                                                                                                                                            |
| <b>Assumptions/Comments</b>    | <ol style="list-style-type: none"> <li>1. Preference Centre template design will align with Alfardan's branding guidelines.</li> <li>2. Legal and compliance requirements for opt-in management in Qatar will be confirmed with Alfardan's legal team.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
